

**Figure S1.** Molecular docking results for all twenty peptides with  $\alpha$ -amylase include binding poses (left panel) as well as interactions (middle panel) and formation of hydrogen bonds (right panel). Blue molecules represent  $\alpha$ -amylase, green molecules are peptide fragments, yellow molecules represent amino acids on  $\alpha$  amylose that interact with peptide segments, red dashed lines indicate interactions, purple molecules represent amino acids on  $\alpha$  amylose that form hydrogen bonds with the peptide segment, and yellow dashed lines indicate interactions.

**Table S1.** Molecular docking results of twenty inhibitory peptides and  $\alpha$ -amylase.

Peptide	Mo <sup>de</sup>	Affinity		Dist from best mode		Peptide	Mod <sup>e</sup>	Affinity		Dist from best mode	
		kcal/mol	Rmsd l.b.	Rmsd u.b.	Rmsd l.b.			Rmsd l.b.	Rmsd u.b.	Rmsd l.b.	Rmsd u.b.
