

Figure S1-S3. PCA score plots of mice hepatic and adipose tissue samples of the five studied groups and QC samples. All groups (HFD, HFDex, ND, WL, WLex) are illustrated with grey color while QC samples are presented with purple color and clustered together.

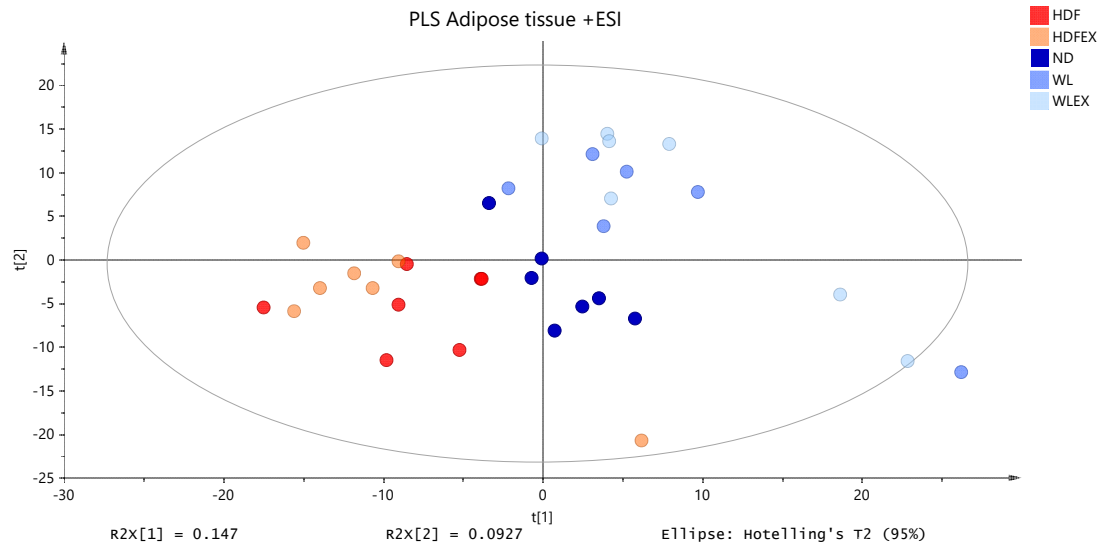

Figure S4 a. PLS score plot of mice adipose tissue samples of the five studied groups. HFD and HFDex groups are clustered together on the negative part of the y-axis, ND group is in the center of the ellipse, while WL and WLex mice are grouped together on the positive side of the same axis.
