

Appendix 3. List of discrete characters encoded from indels recorded on Tropomyosin alignments

Appendix 3-1. On the whole dataset, 12 different regions with indels variable intraspecifically have been identified based on all Tropomyosin gene copies obtained from individuals belonging to *D. gallinae* (named using the first letters of alphabet, followed in some cases by a number). Additionnally, insertions/deletions which were not potentially discriminant between populations of *D. gallinae* were named using ID (In/Del) followed by a number.

Character name	Presence of intraspecific variation according to presence/absence of the considered insert	Position of insert (based on alignment ISOL-TRO1)	Character state	Code	Character state	species of Dermanyssus concerned	Comments
ID1		37	c	1	<i>D. carpathicus</i>		
			absent	0	<i>all others</i>		
ID2		106-108	ttc	2	<i>D. gallinae</i>		
			gtc	1	<i>D. apodis</i>		
			absent	0	<i>D. carpathicus, D. hirundinis, D. longipes</i>		
A	x	130-132	gtg	1	<i>D. gallinae</i>		
			absent	0	<i>D. gallinae, D. apodis, D. carpathicus, D. hirundinis, D. longipes</i>
