Supplementary Figure 1. Heatmap of the genetic correlations between 24 wheat agronomic traits. The correspondence between colour scale and genetic correlation levels are presented on the right-hand side of the heatmap. Trait codes: BPP = above-ground biomass per plant; CH1 = flag leaf chlorophyll content at flowering date; CH2 = flag leaf chlorophyll content three weeks after flowering date; DTH = days to heading; DTF = days to flowering; FSS = fertile spikelets per spike; GY = grain yield; HF = days between heading and flowering; HI = harvest index; KN = number of kernels per m²; KS = number of kernels per spike; KSL = number of kernels per spikelet; LA = flag leaf area; LW = flag leaf width; PE = peduncle extrusion; PL = peduncle length; PPS = production per spike; PT = productive tillering; SD = spike density; SH = stem height; SI = spike index; SL = spike length; SSS = sterile spikelets per spike; TKW = one thousand grain weight.
