

## Supplementary Information

**Figure S1.** *q*-values distribution of the whole sampling genotypes provided by a STRUCTURE run assignment with  $k = 5$ . G (Golema river system), K (Kranska), BU (Brajcinska upstream), BR (Brajcinska Rzanska) and BD (Brajcinska downstream) samples constitute a subgroup each (in bold). A (Agios-Germanos river system) and L (lake trout) are composed of various proportions of the 5 former subgroups.

**Table S1.** List of comparative reference populations used to test the specific nature of the Lake Prespa trout used in Figure 2.
