Figure S1. Nucleotide and amino acid sequences of the eight studied PgWRKYS (*PgWRKY2*, *PgWRKY3*, *PgWRKY4*, *PgWRKY5*, *PgWRKY6*, *PgWRKY7*, *PgWRKY8*, and *PgWRKY9*). The nucleotides are presented in the upper line and the amino acid residues are shown below. The WRKY motifs are underlined with pink color and cysteine (C) and histidine (H) residues in the putative zinc-finger motifs with blue color.

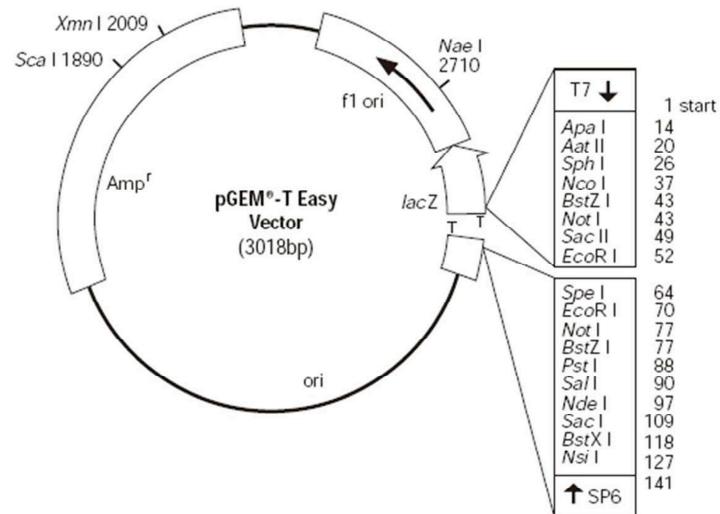

Figure S2. The pGEM-T Easy vector used for cloning. The arrow located inside the loop indicates the single strand phage DNA (for DNA sequencing) replication and the arrow present outside indicates multiple cloning sites.
