

Supplementary Figure 1. Histologic analysis of knee joints in mice on day 42. (A) Paraffin-embedded knee sections were stained with hematoxylin and eosin. Original magnification $\times 100$.

Supplementary Figure 2. Effect of sclareol on cell viability and cytokines production in human synovial fibroblast primary cells. Cells were stimulated with 10 ng/mL IL-1 β with or without for sclareol for 72 h. (A) The cell proliferation of human synovial fibroblast primary cells was evaluated with the CCK-8 assay. (B) The cytokine levels in culture supernatant were examined by ELISA. Bar graphs represent the mean \pm SD of triplicate tests. * $p < 0.05$ and ** $p < 0.01$ versus DMSO-treated vehicle group. The data are representative of three independent experiments with similar results.
