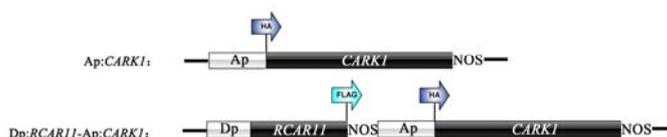

Figure S1. Construction of vectors for transgenic plants. Construction of vectors of Dp:*CARK1* and ANDp:*CARK1* transgenic plants were the same as Ap:*CARK1* transgenic plants.

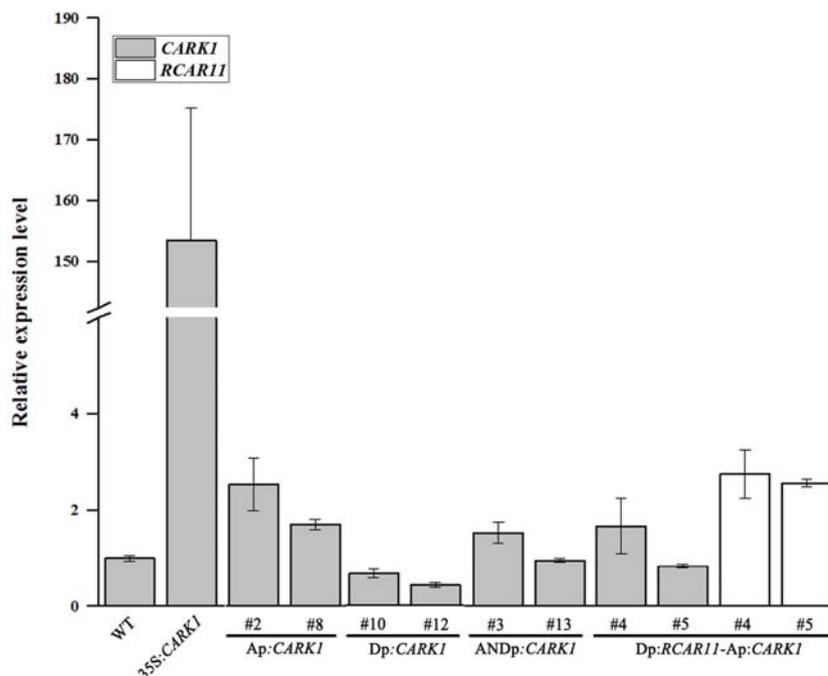

Figure S2. Relative expression levels of effector genes of transgenic plants under normal conditions were determined by qRT-PCR analysis.

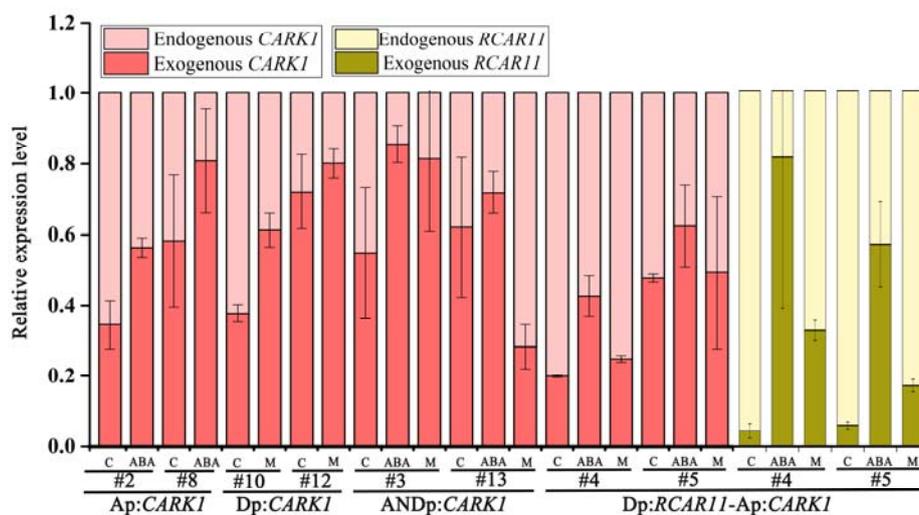

Figure S3. Expression levels of *CARK1* and *RCAR11* under the treatment of ABA or D-mannitol by qRT-PCR analysis. Twelve-day-old seedlings were incubated in MS liquid medium with or without 50  $\mu$ M ABA for 3 h and 200 mM D-mannitol for 2 h. The total *CARK1* and *RCAR11* were amplified by primers F and R, respectively. The exogenous *CARK1* was amplified by primers F(HA) and R. The exogenous *RCAR11* was amplified by primers F and R(FLAG). *ACTIN2/8* was used as an internal control. The expression level of total *CARK1* or *RCAR11* was 1.

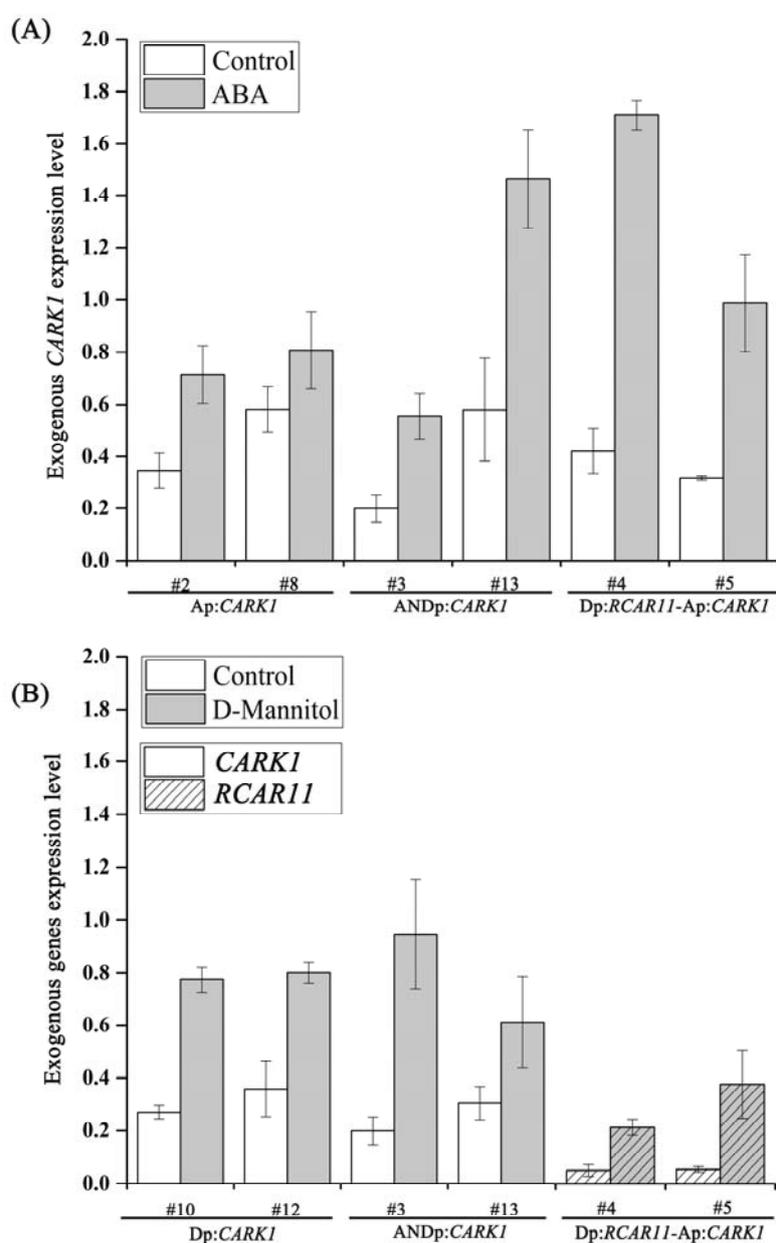

Figure S4. Expression levels of exogenous *CARK1* and *RCAR11* under the treatment of ABA or D-mannitol by qRT-PCR analysis. **(A)** ABA 12-day-old seedlings were incubated in MS liquid medium with or without 50  $\mu$ M ABA for 3 h. **(B)** D-Mannitol 12-day-old seedlings were incubated in MS liquid medium with or without 200 mM D-mannitol for 2 h. The exogenous *CARK1* was amplified by primers F(HA) and R(CARK1), and the exogenous *RCAR11* was amplified by primers F(RCAR11) and R(FLAG).

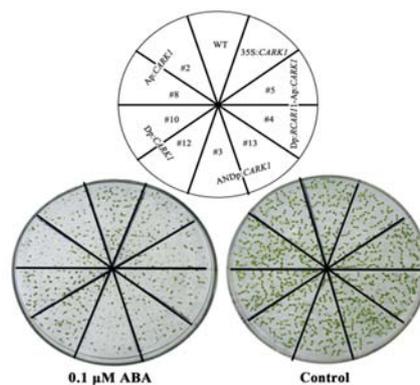

Figure S5. Cotyledon greening assay. Seeds were in MS medium supplemented with or without 0.1 μM ABA, and cotyledon greening rates were recorded after 5 days. The ratio of cotyledon greening was determined for over 70 seeds from three independent experiments.

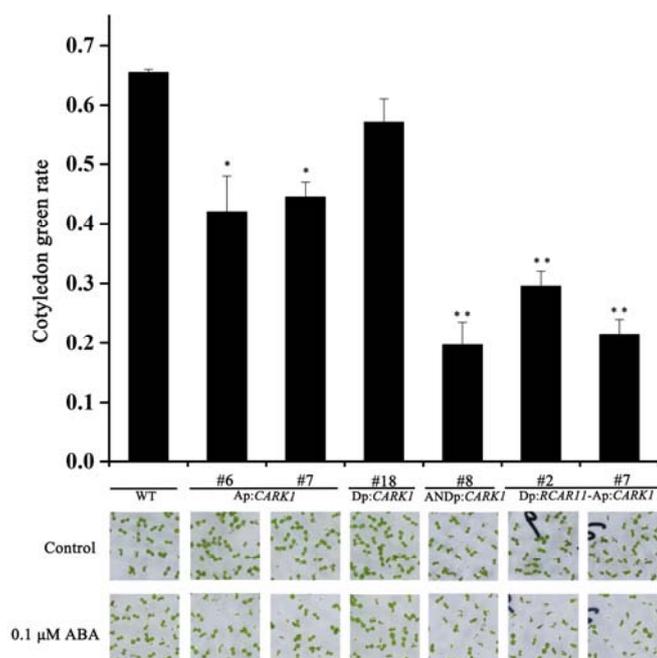

Figure S6. Cotyledon greening assay.

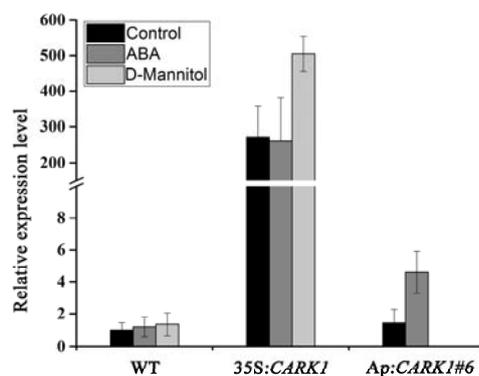

Figure S7. Relative expression levels of total *CARK1* by qRT-PCR analysis. Twelve-day-old seedlings were incubated in MS liquid medium with or without 50  $\mu$ M ABA for 3 h and 200 mM D-mannitol for 2 h.

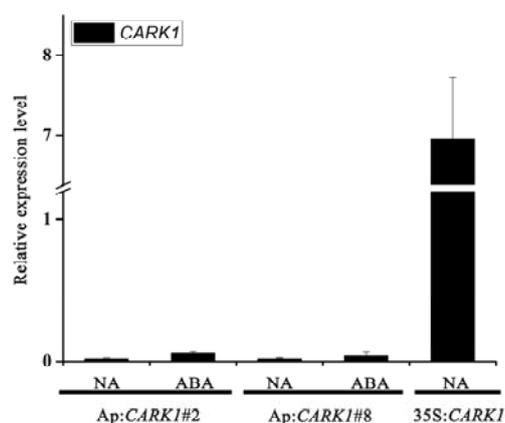

Figure S8. Relative expression levels of exogenous *CARK1* by qRT-PCR analysis. Twelve-day-old seedlings were incubated in MS liquid medium with or without 50  $\mu$ M ABA for 3 h. The primers were F(*CARK1*) and R(*NOS*).

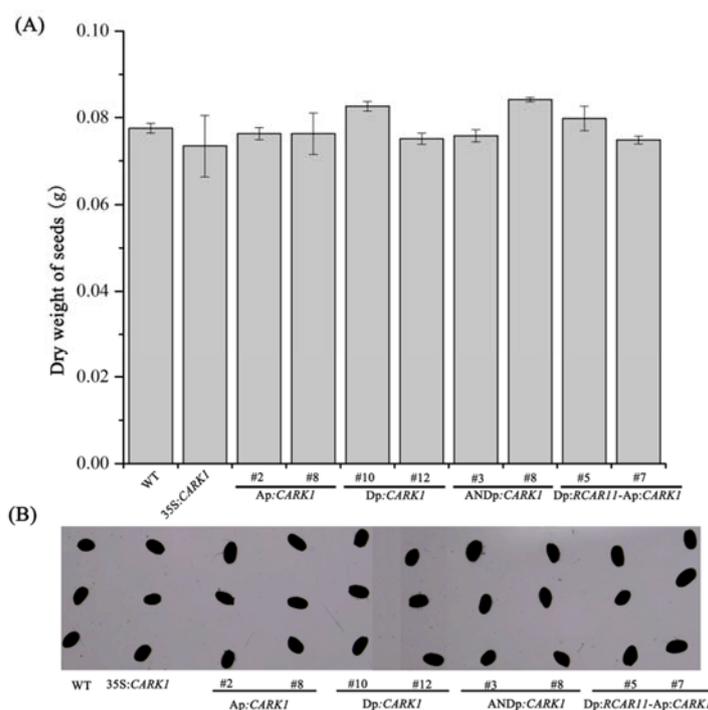

Figure S9. Phenotypic analysis of seeds. **(A) Dry weight of seeds.** Weighing 0.1 mL volume of dried seeds of all transgenic plants under normal growth conditions. **(B) The size of seeds.** The image was taken by the microscope.

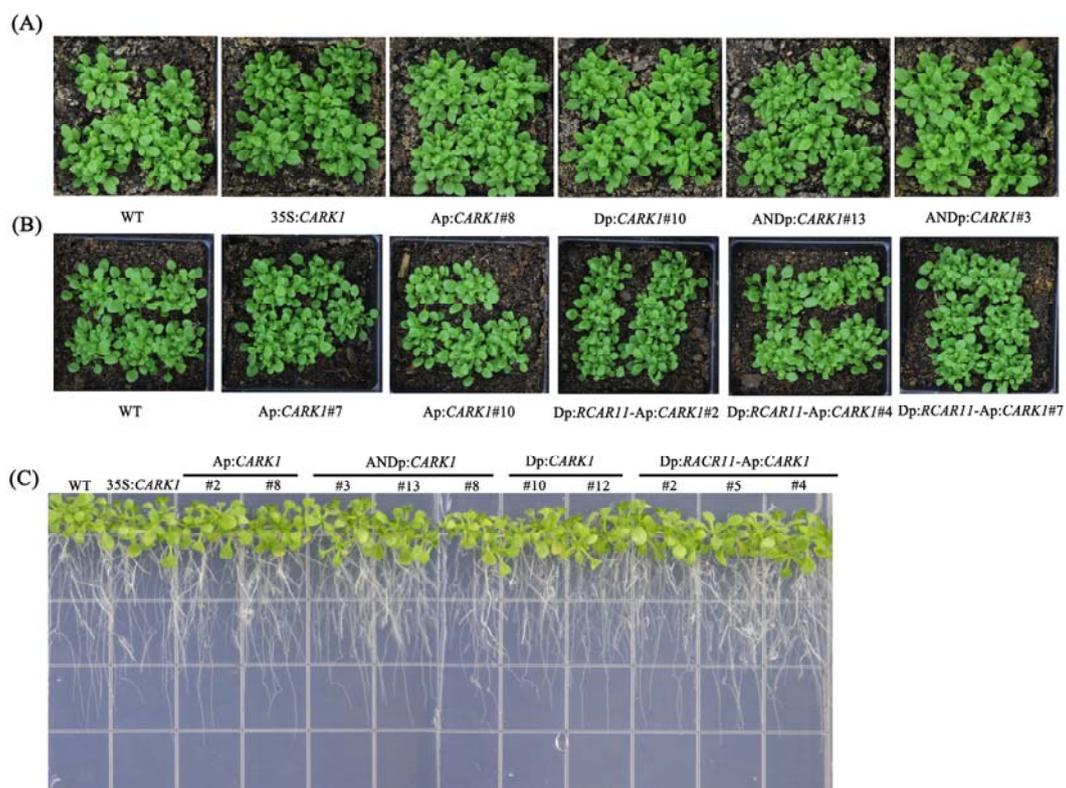

Figure S10. The growth of plants under normal conditions. (A) and (B) Two-week-old *Arabidopsis thaliana* plants in soil. (C) The growth of *Arabidopsis thaliana* plants in MS medium.
