Figure S1. Fluorescence excitation spectra of **TB** (panel A) and **TSF** (panel B) dissolved in H₂O at different pH. The spectra were measured at room temperature.

Figure S2. Fluorescence excitation spectra of TS dissolved in H₂O at different pH (panel A pH=2, panel B pH=3, panel C pH=4, panel D pH=5, panel E pH=6, panel F pH=7). The spectra were measured at room temperature.

Figure S3. Intensity of resonance light scattering spectra in 436 nm of TB (black circles), TS (red circles) and TSF (blue circles) relative to change in pH.

Figure S4. The ratio of the maximum fluorescence intensity at 434/492 nm for TS and TSF dissolved in butan-1-ol in different excitation depending on the changes in concentration.

Figure S5. Stokes shift variation with normalized value of solvent polarity E_T^N for **TB**, **TS** and **TSF** for various solvent (1 - cyclohexane, 2 - toluene, 3 - chloroform, 4 - ethyl acetate, 5 - butan-1-ol, 6 - propan-2-ol, 7 - ethanol, 8 - DMF, 9 - DMSO, 10 - methanol, 11 - acetonitrile).

Figure S6. Stokes shift versus $F(\epsilon, n)$ for (panel A), $\nu_a + \nu_f$ versus $F(\epsilon, n) + 2g(n)$ (panel B), for TB, TS, TSF dissolved in different solvents (1 - cyclohexane, 2 - toluene, 3 - chloroform, 4 - ethyl acetate, 5 - butan-1-ol, 6 - propan-2-ol, 7 - ethanol, 8 - DMF, 9 - DMSO, 10 - methanol, 11 - acetonitrile).

Figure S7. Fluorescence lifetimes (τ) and fractional intensities (%) measured for **TSF**, **TS** and **TB** relative to pH. Panel A – the main fluorescence lifetime component and panel B - the main fluorescence lifetime component + the second component when present.

Figure S8. DPPH• radicals (200 μM) absorption intensity decrease at $\lambda_{\max}$ 519 nm in the presence of increasing concentration of tested compounds after 30 min of reaction at 25 °C.

Figure S9. Percentage of reduced DPPH• radicals under the influence of increasing concentration of compounds tested after 30 minutes of reaction at 25 °C. The measurements were taken at $\lambda_{\max}$ 519 nm.

Figure S10. Tandem mass spectrometry (MS/MS) of the thiadiazole derivatives studied: A) TB, B) TS, and C) TSF. The corresponding MS-chromatographic traces are given in inserts. The MS/MS measurements were carried out using the collision energy of -30 eV.

Table S1. Spectroscopic data. Maximum absorbance, maximum fluorescence and Stokes shift in cm^{-1} for TB, TS, TSF.

Solvents	Absorbance [cm^{-1}]			Fluorescence [cm^{-1}]			Stokes shift [cm^{-1}]		
	TB	TS	TSF	TB	TS	TSF	TB	TS	TSF
Methanol	33333	31949	31949	26 178	25 316	24 814	7 155	6 633	7 135
Acetonitrile	33557	31250	31447	26 738	24 752	24 631	6 819	6 498	6 816
