Scheme S1 Preparation of QA and QB.

Table S1 The atomic percentage (C1s, N1s and O1s) of untreated luffa sponge, QA and QB.

Name	C1s	N1s	O1s
Untreated luffa sponge	76.56%	0.67%	22.77%
QA	63.85%	5.60%	30.55%
QB	68.62%	2.56%	28.82%

Table S2 The information of the observed phosphopeptides obtained from tryptic digests of β -casein, α -casein, and non-fat milk.

No.	[M+H] ⁺ (monoisotopic)	No. phosphorylation	of Sequence

(*) methionine oxidation

Fig. S1 MALDI mass spectra of the tryptic digest mixtures of β -casein and BSA (a, c) without or (b, d) with enrichment. The molar ratios of β -casein to BSA were (a, b) 1:10 and (c, d) 1:100, respectively. The concentration of β -casein was 3 pmol.

Fig. S2 MALDI mass spectra of tryptic digests of β -casein after enrichment using QB. The amounts of tryptic digest of β -casein used in the experiments were (a) 300 fmol and (b) 30 fmol.
