- a Summed up eXtracted Ion Current (XIC) of the isotopic cluster belonging to the light label partner of all peptide ions assigned to a Protein Group. It is proportional to the analyte concentration/abundance in the cell grown in the light medium
- b Summed up eXtracted Ion Current (XIC) of the isotopic cluster belonging to the heavy label partner of all peptide ions assigned to a Protein Group. It is proportional to the analyte concentration/abundance in the cell grown in the heavy medium
- c Median of all ratios between the intensities of each heavy and light label peptide partners. It is also called "SILAC ratio"
- d Assuming that most proteins do not change in a comparative analysis, the median of H/L ratio sub-populations was shifted to 1. Generally this value is preferred to the previous one, for minimizing the effect of outliers and for correcting for unequal protein amounts.
- e We use the log₂ for ratios because we want to represent up and down regulated proteins on the same scale
- f Coefficient of variability over all redundant quantifiable peptides. It is calculated as the standard deviation of the natural logarithm of ratios times 100. These data are used for a statistical evaluation of SILAC ratios over all the twelve experiments. In "forward" experiments (FRW), cells treated with quercetin were grown in a medium containing Arg and Leu heavy labelled; consequently original H/L normalised ratios, expressed as log₂ were used.
- g Conversely, in "reverse" experiments (REV) "heavy" cell cultures refers to the untreated status: for sake of clarity, in columns inverted values for H/L normalised ratios are shown. In the legend of single experiments, numbers refers to the biological replicates, whereas letters to the technical replicates.
- h *p* -value was obtained performing one sample T Test
- i Numerical column with the -log₁₀ transformed *p* - value
- l Numerical column with the t-test difference corresponding to average of expression value
- m '+' shows statistically significant quantitative data with respect to the specified threshold <0.05
