Supplemental Figure S1. (**A**) AR shRNA expression was confirmed by RT-PCR and western blotting in caki-2 cells. Bars represents the means \pm SDs of three independent experiments, and * denotes P < 0.05 (student t-test) versus the control group (ctr_sh). (**B**) Crystal violet staining for colonies from same numbers of indicated shRNA-expressing Caki-2 cells (**C**) The time dependent viability changes of control shRNA and AR shRNA expressing caki-2 cells were measured using EZ-Cytox solution. Bars represents the means \pm SDs of three independent experiments, and * denotes P < 0.05 (student t-test) versus the cr_sh group.

Α

Supplemental Figure S2. LSD1 knock-down reduced cell mobility and EMT related gene expression in kidney cancer cell line. (**A**) Western blotting of indicated EMT markers after 24 hours treatment with enzalutamide (ENZ) on control or LSD1 shRNA expressing cells. (**B**) Quantitative PCR was used to examine the transcriptional level of the EMT marker genes in Caki-2 cells expressing control or LSD1 shRNA after 2 days of enzalutamide treatment. Error bars represent the mean \pm SD of three independent experiments and * denotes P < 0.05 (student's t-test) versus ctr_sh group.
