Supplementary Table legends

Table S1. Three candidate GES sequences from the *D. officinale* genome.

Table S2. The reported TPS proteins from other plant species used in the phylogenetic analysis.

Table S3. Gene-specific primers used in the experiments.

Supplementary Figure legends

Figure S1. Transcription levels of *DoGES1*, *DoGES2*, and *DoGES3* in different *D. officinale* tissues.

Figure S2. Agarose gel electrophoresis of cDNA amplification of the *DoGES1* gene.

Figure S3. SDS-PAGE analysis of DoGES1 recombinant protein expressed in *Escherichia coli* BL21.

Figure S4. Content of geraniol in semi-open *D. officinale* flowers at 8:00, 11:00, 14:00, and 17:00.

Figure S5. Putative regulatory *cis*-elements in the *DoGES1* promoter.

Figure S6. Different developmental stages of *D. officinale* 'Zhongke 5' flowers.

Table S1. Three candidate GES sequences from the *D. officinale* genome.

DoEF-1 α -R	CCAACAGGCCACAGTTGTCG	

Gene-specific primers for real-time quantitative reverse transcription PCR (qRT-PCR) were designed by the PrimerQuest online tool (<http://www.idtdna.com/Primerquest/Home/Index>). The *D. officinale* actin gene (DoEF-1 α) was obtained from NCBI (JF825419). F, forward; R, reverse.

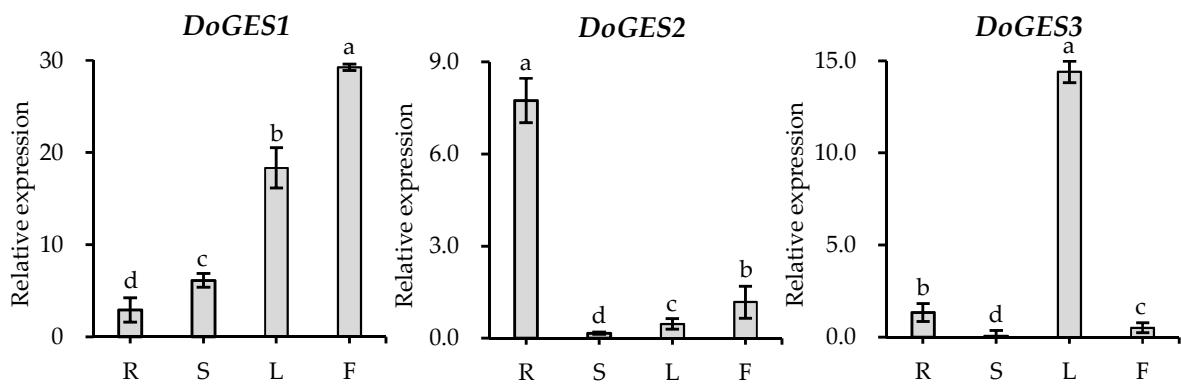

Figure S1. Transcription levels of *DoGES1*, *DoGES2*, and *DoGES3* in different *D. officinale* tissues. Different letters above error bars (standard deviation) ($n = 10$) indicate significant differences between treatments ($p < 0.05$, Duncan's multiple range test). R, roots; S, stems; L, leaves; F, flowers.

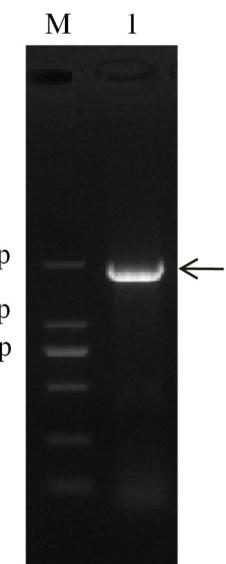

Figure S2. Agarose gel electrophoresis of cDNA amplification of the *DoGES1* gene. M, marker D2000 (M122, GenStar Inc., Beijing, China).

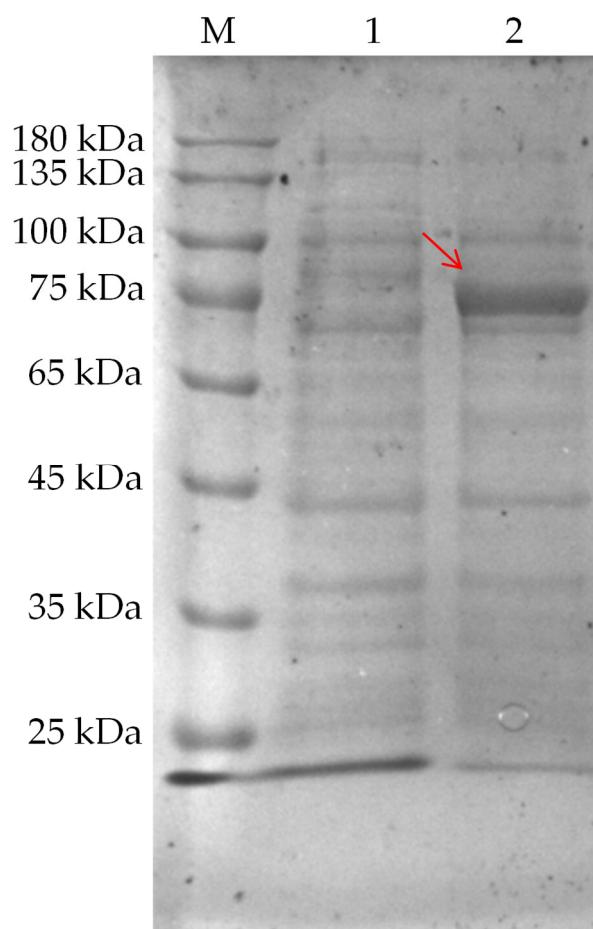

Figure S3. SDS-PAGE analysis of DoGES1 recombinant protein expressed in *Escherichia coli* BL21. Lane 1 indicates empty vector pET32a. Lane 2 indicates the elute of pET32a-DoGES1 protein. M indicates protein marker 10-180 kDa (M221, GenStar Inc., Beijing, China).

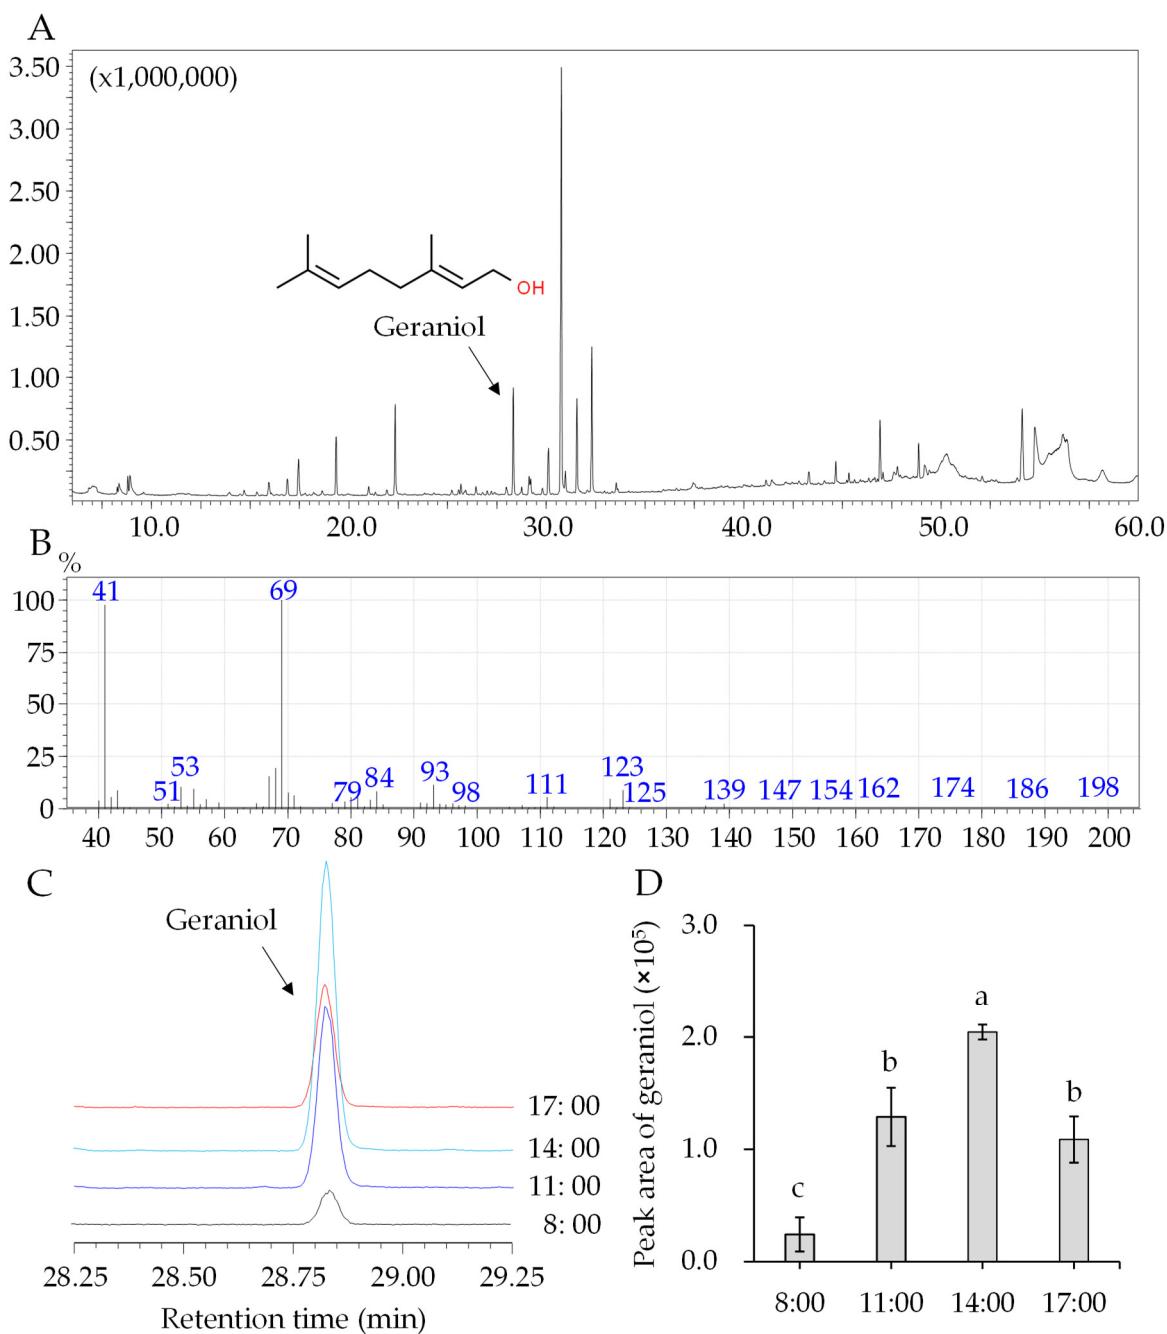

Figure S4. Content of geraniol in *D. officinale* semi-open flowers at 8:00, 11:00, 14:00, and 17:00. Each bar represents the mean (\pm standard error, $n = 10$) of three independent biological replicates. Different letters above the bars indicate significant differences ($p < 0.05$, Duncan's multiple range test).

Figure S5. Putative regulatory *cis*-elements in the DoGES1 promoter. The CGTCA-motif is indicated in red at the -1440 position. The MYC motif is indicated in blue at +675, -731, and -1473 positions. PlantCARE (<http://bioinformatics.psb.ugent.be/webtools/plantcare/html/>) was used for the promoter analysis. The initiation codon of DoGES1 gene (ATG) is set as position 0.

Figure S6. Different developmental stages of *D. officinale* 'Zhongke 5' flowers. Three developmental stages of *D. officinale* 'Zhongke 5' flowers, includes budding, semi-open flower, and fully-open flower.
