

Supplementary Figure 1: B7-H3 levels in MB cells. A. Western blot analysis of D283 control and B7-H3_OE cell lysates to check the B7-H3 levels. B. Western blot showing levels of B7-H3 in different MB cell lysates. Actin was used as a loading control.

Supplementary Figure 2: F-actin and Calcein AM stains. A. The negative control to confirm non-specific Calcein AM staining was done using SFM (processed in the same way as exosome extraction) overlayed on D458 cells followed by F-actin staining. B. D458 cells incubated with Calcein AM reagent (positive control).

Supplementary Figure 3: Original Immunoblots. Original full-length immunoblot blots that correspond to Figure 3C in the manuscript. Actin was used as a loading control.
