

Figure S3 Apoptotic effect of Ori or Iru in **(A)** A375 and MKN28 cells. Cells were incubated for 24 h with 10 μ M Ori or Iru. Annexin V–FITC binding and the propidium iodide incorporation were evaluated cytofluorimetrically. The rates of apoptosis were quantified (top right quadrant). The data are expressed as a percentage of apoptotic cells adding the percentual of Annexin V-positive/PI-negative cells (early apoptotic cells), and Annexin V-positive/PI-positive (late apoptotic cells). Data are shown from one of three independent experiments.
