

Supplemental Figure 1: Extracellular matrix of the donor tissue and Mohawk immunoreactivity of isolated non-transfected and SV40 transfected cells. A: Resorcin-Fuchsin staining of the ACL tissue to visualize elastic fibers. B: fibronectin immunolabeling of the ACL tissue. C, D: Mohawk expression in non-transfected (C) and transfected cells (D). A: Scale bar: 100 μ m, B-D: Scale bars: 50 μ m.
