

Supplementary Materials

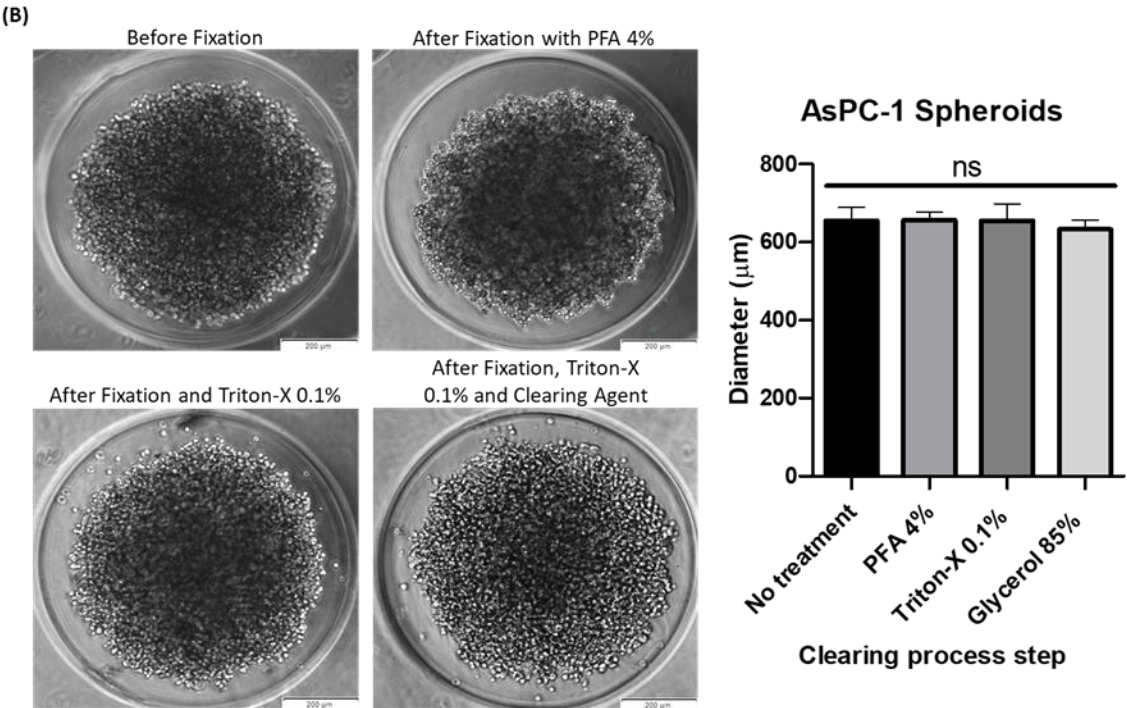

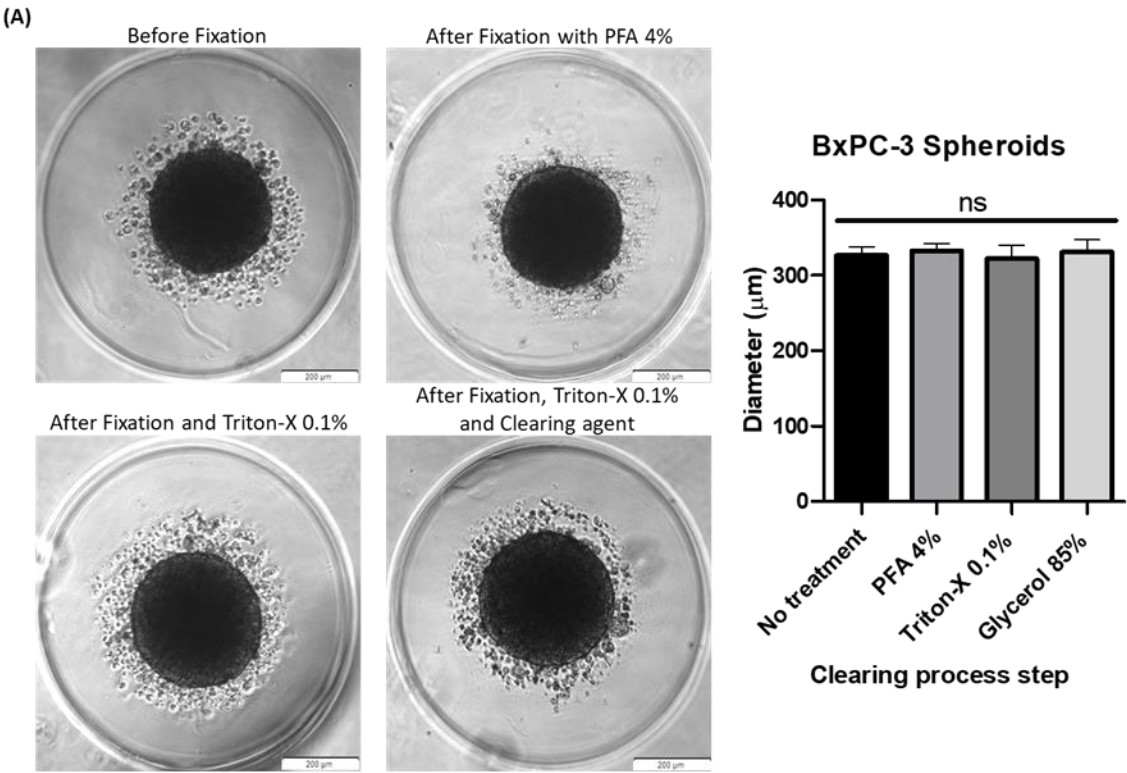

Figure S1. Comparing the size of BxPC-3 and AsPC-1 spheroids before and after each step of the clearing process. Light microscopy images of (A) BxPC-3 and (B) AsPC-1 spheroids taken before fixation, after fixation (with PFA 4%), following treatment with Triton-X 0.1% and after treatment with glycerin 85%. Results confirm the process had no effect on the spheroids' size. Radiuses were calculated using ImageJ and data was statistically analyzed using GraphPad Prism 8 (n=20-28).
