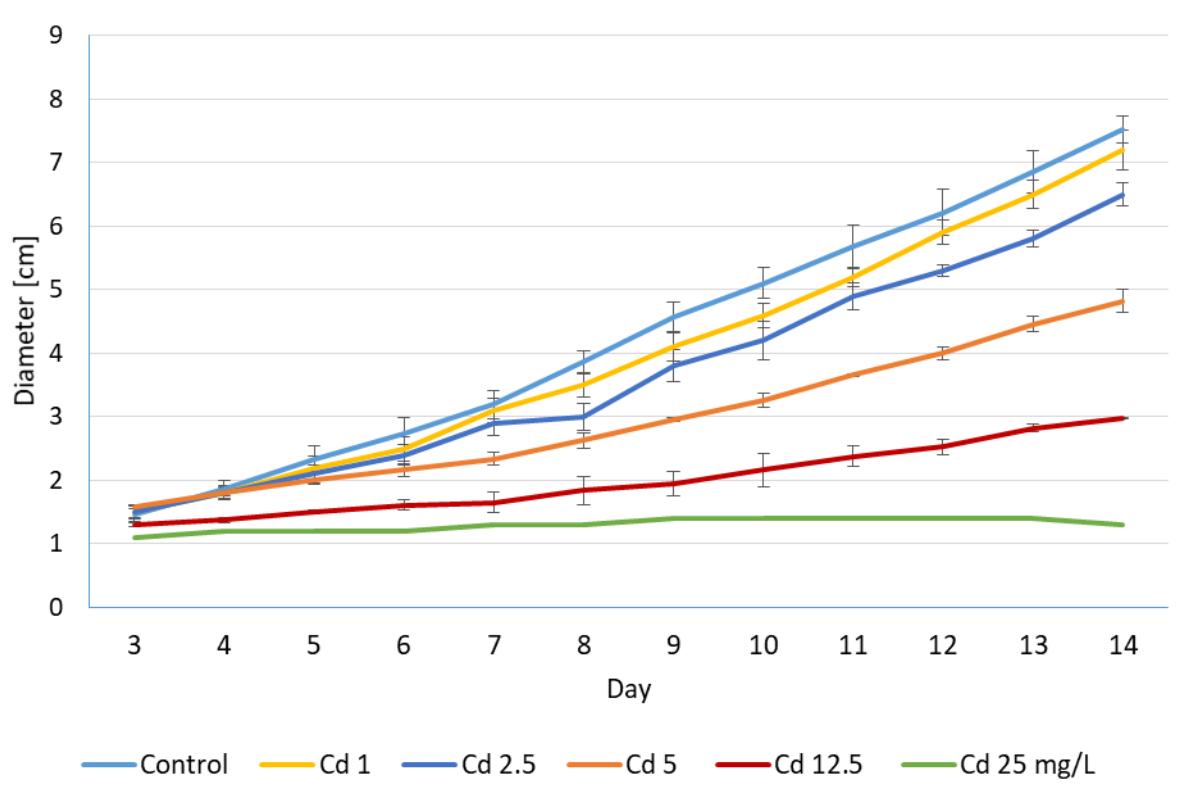

Figure S1. The effect of various Cd concentrations on *P. infestans* *in vitro* growth. Radial growth of *P. infestans* was measured on medium supplemented with 0 mg/L, 1 mg/L, 2.5 mg/L, 5 mg/L, 12.5 mg/L and 25 mg/L of Cd; The results are an average from three independent experiments \pm SD.

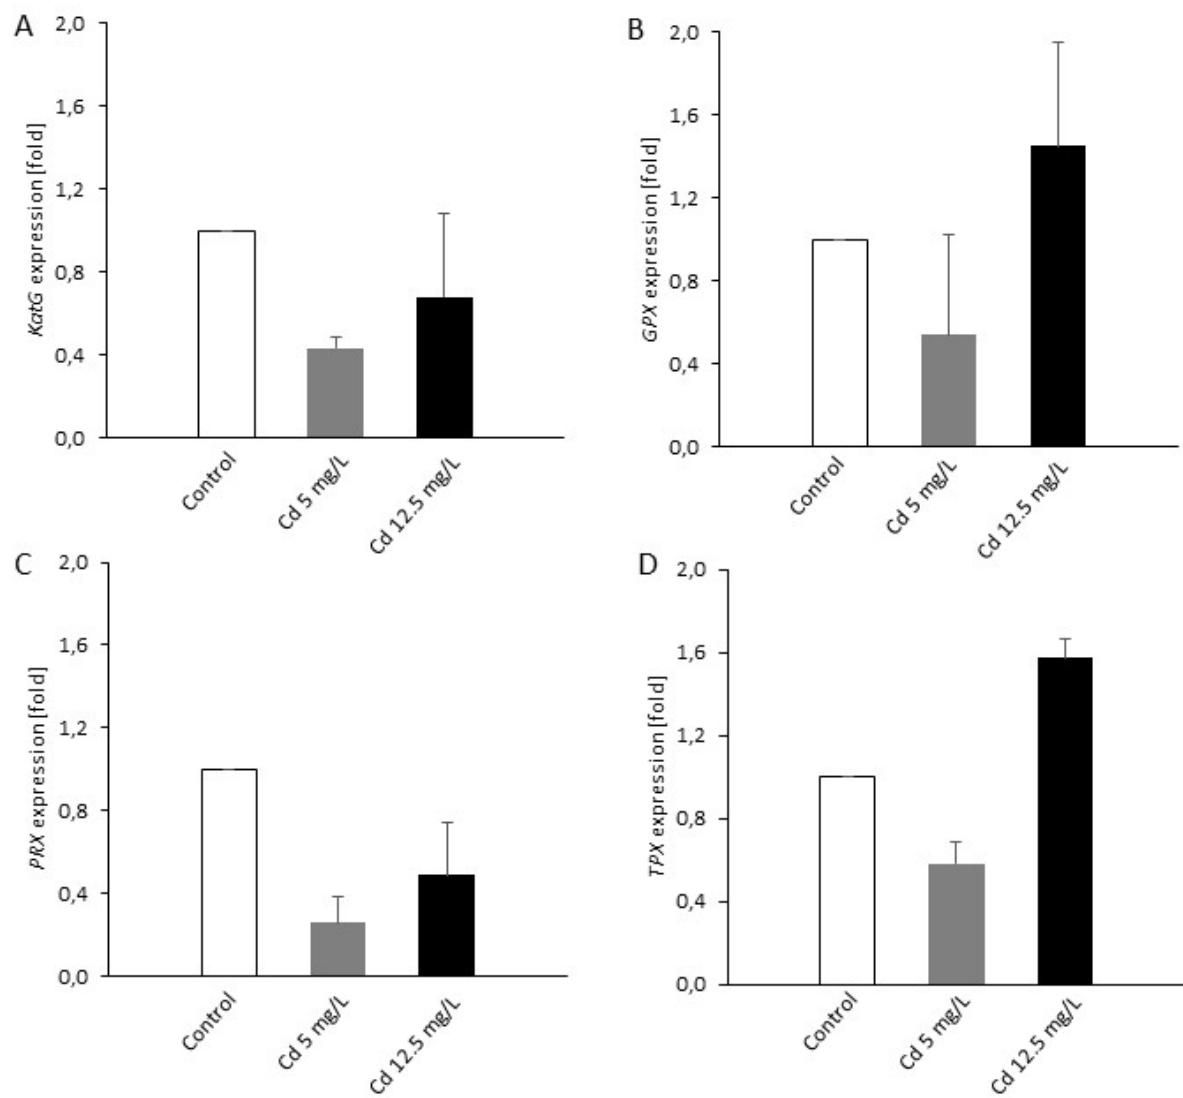

Figure S2. The effect of Cd on the selected elements of the enzymatic antioxidant system in *P. infestans*. RT-qPCR analysis of (A) *CatG*, (B) *GPX*, (C) *PRX* and (D) *TPX* genes expression. The results are an average from three independent experiments \pm SD;
