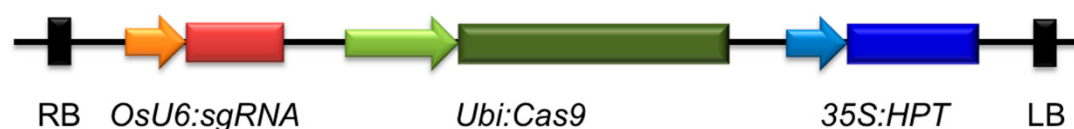

Figure S1. Schematic diagram of T-DNA region of the CRISPR/Cas9 vector. RB, right border; LB, left border.

Figure S2. Segregation analysis of transgenes in T₁ mutant lines. One T₁ mutant line was selected for each target. The numbers 1–10 indicate different plants. VC, vector control; WT, wild type; M, DL2000 marker.

Figure S3. Detection of transgenes in additional 10 T₁ plants of line Osfwl3a#4. All these plants contained the three transgenes.

Figure S4. Epidermal cell size analysis of flag leaves of the wild type (WT) and *OsFWL4* gene mutants. (A) Leaf epidermal cells of the WT and *OsFWL4* gene mutants, bar = 20 μm. (B) Measurement of epidermal cell length of flag leaves in the WT and mutants. (C) Measurement of epidermal cell width of flag leaves in the WT and mutants. Error bars in (B) and (C) are standard deviations of 100 cells.

Figure S5. Plant height of the wild type (WT) and *OsFWL4* gene mutants. Error bars are standard deviations of 15 plants. *** $P < 0.001$.

Figure S6. Phenotypes of wild type (WT) and *OsFWL1* gene mutants. **(A)** Plant height of WT and *OsFWL1* gene mutants, $n = 10$. **(B)** Flag leaf length and width of the WT and *OsFWL1* gene mutants. The values are means of 10–12 plants. **(C)** Grain yield per plant of WT and *OsFWL1* gene mutants, $n = 10$. Error bars are standard deviations.

Table S1. Targeted genomic mutations induced by the clustered regularly interspaced short palindromic repeats (CRISPR)/CRISPR-associated protein 9 (Cas9) system in the T₀ plants. The target sites are marked in red and the protospacer adjacent motif (PAM) sequences are underlined. The inserted or substituted nucleotides are shown in green. The plant name and zygoty are in bold font. Ref, reference sequence; Al#, different alleles; WT, wild type; i#, number of bp inserted; i#a/b, same number of different nucleotides inserted in the same site; d#, number of bp deleted; d#a/b, deletion of the same number of nucleotides at different sites; s#, number of bp substituted.
