

Figure S3. SDS-PAGE total protein analysis of microsomes from *E. coli* transformed by pET15b::*LPIAT* (lane 2) or empty pET15b (lane 3). MM, molecular marker (lane 1). 100 μ L of microsomes were centrifuged and resuspended in 10 μ L of loading buffer and loaded in a 12% polyacrylamide gel. After migration, proteins were revealed by Coomassie blue.
