

Supplementary Materials

Figure S1. Reciprocal regulation of ASCR and DA gene expression with different amounts of food. (A) Food intake rates of N2, *daf-22(ok693)* and *daf-9(dh6) daf-12(rh61 rh411)* worms with different food levels OP50 (OD₆₀₀ 1.0), OP50 (OD₆₀₀ 2.5) and abundant food (OP50 fully

grown and saturated in 2xYT). Data are expressed as a percentage of N2 (OD₆₀₀ 1.0). Data are shown as mean $\pm$ SEM of four independent experiments (n=10). * P = 0.0175, two-way ANOVA analysis. **(B)** ASCR biosynthetic gene expression in N2 and *daf-9(dh6) daf-12(rh61 rh411)* worms that had been fed with high OP50 (OD₆₀₀ 2.5) or low OP50 (OD₆₀₀ 1.0) food levels. Data are shown as mean $\pm$ SEM of three biologically independent experiments. * P < 0.05 and ns (not significant) were determined by one-way ANOVA analysis. The exact P -values are reported in Supplementary Table S4. **(C)** DA biosynthetic gene expression in N2 and *daf-22(ok693)* worms that had been fed with high OP50 (OD₆₀₀ 1.0) or low OP50 (OD₆₀₀ 1.0) food levels. **(D)** *daf-36* gene expression in N2 and *daf-22(ok693)* fed with high OP50 (OD₆₀₀ 1.0) or low OP50 (OD₆₀₀ 1.0) food levels. For **(C)** and **(D)**, data are shown as mean $\pm$ SEM of four biologically independent experiments. * P < 0.05, ** P < 0.01 and ns (not significant) were determined by one-way ANOVA analysis. The exact P -values are reported in Supplementary Table S5. **(E)** DA biosynthetic gene expression in N2 and *daf-16(mu86)* L4 worms under AL and BD conditions. Data are shown as mean $\pm$ SEM of three biologically independent experiments. * P < 0.05, ** P < 0.01 and ns (not significant) were determined by one-way ANOVA analysis. The exact P -values are reported in Supplementary Table S10.
