

Supplementary material:

- I. The following fragmentation ions were found in the MS / MS spectrum of compound E:

Table S1.

Compound	MW	Quazi-molecular Ion adduct	m/z
Substrat E	349	M+H	350
Fragmentation product	306	M+H	307
Fragmentation product	256	M+H	257
Fragmentation product	230	M+H	231
Fragmentation product(x2)	159	M+H	160
Fragmentation product	131	M+H	132
Fragmentation product	117	M+H	118

- II. The following fragmentation ions were found in the MS / MS spectrum of compound F:

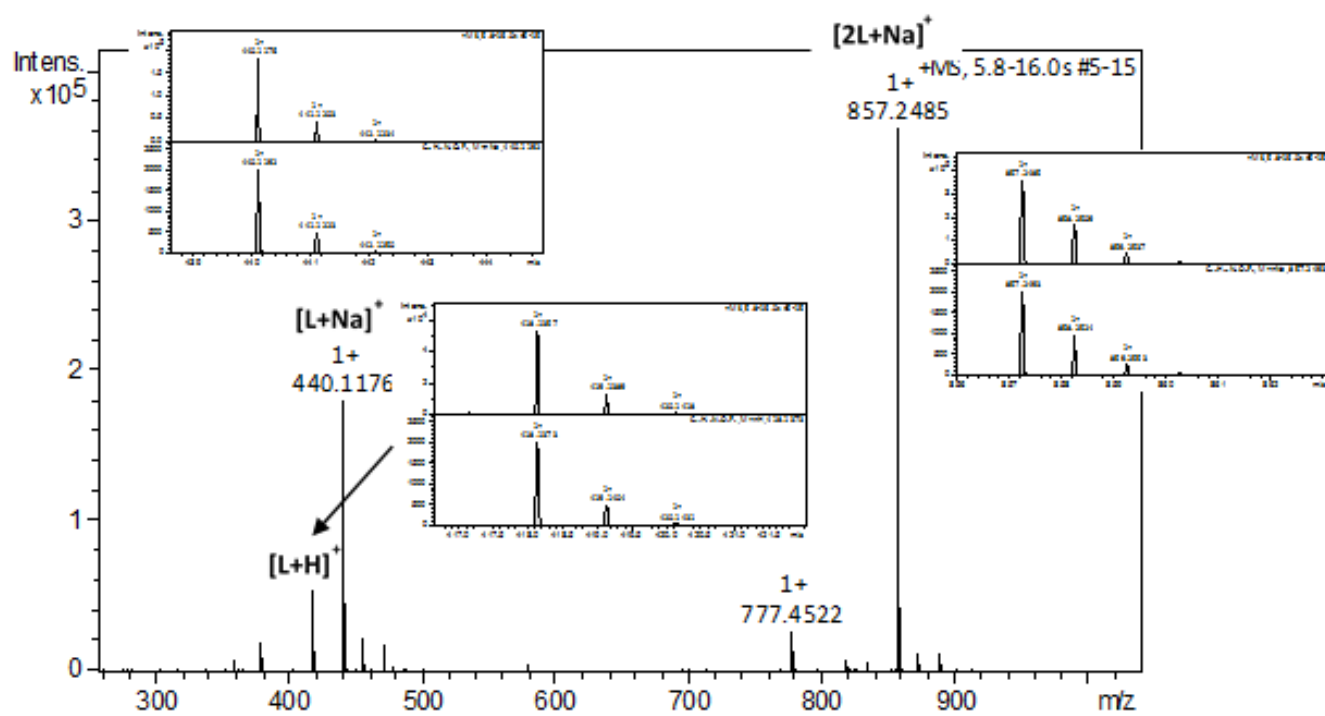

Table S2.

Compound	MW	Pseudo-molecular ion adduct	m/z
Substrat F	417	M+H	418
Fragmentation product	374	M+H	375
Fragmentation product	230	M+H	231
Fragmentation product	187	M+H	188
Fragmentation product	159	M+H	160

III. The following fragmentation ions were found in the MS / MS spectrum
of compound **G**:

Table S3.

Compound	MW	Quazi-molecular Ion adduct	m/z
Substrat G	379	M+H	380
Fragmentation product	336	M+H	337
Fragmentation product	256	M+H	257
Fragmentation product	230	M+H	231
Fragmentation product	192	M+H	193
Fragmentation product	159	M+H	160
Fragmentation product	149	M+H	150

IV. The following fragmentation ions were found in the MS / MS spectrum of compound **H**:

Table S4.

Compound	MW	Quazi-molecular ion adduct	m/z
Substrat H	379	M+H	380
Fragmentation product	336	M+H	337
Fragmentation product	256	M+H	257
Fragmentation product	230	M+H	231
Fragmentation product	192	M+H	193
Fragmentation product	159	M+H	160
Fragmentation product	149	M+H	150

- V. The following fragmentation ions were found in the MS / MS spectrum of compound I:

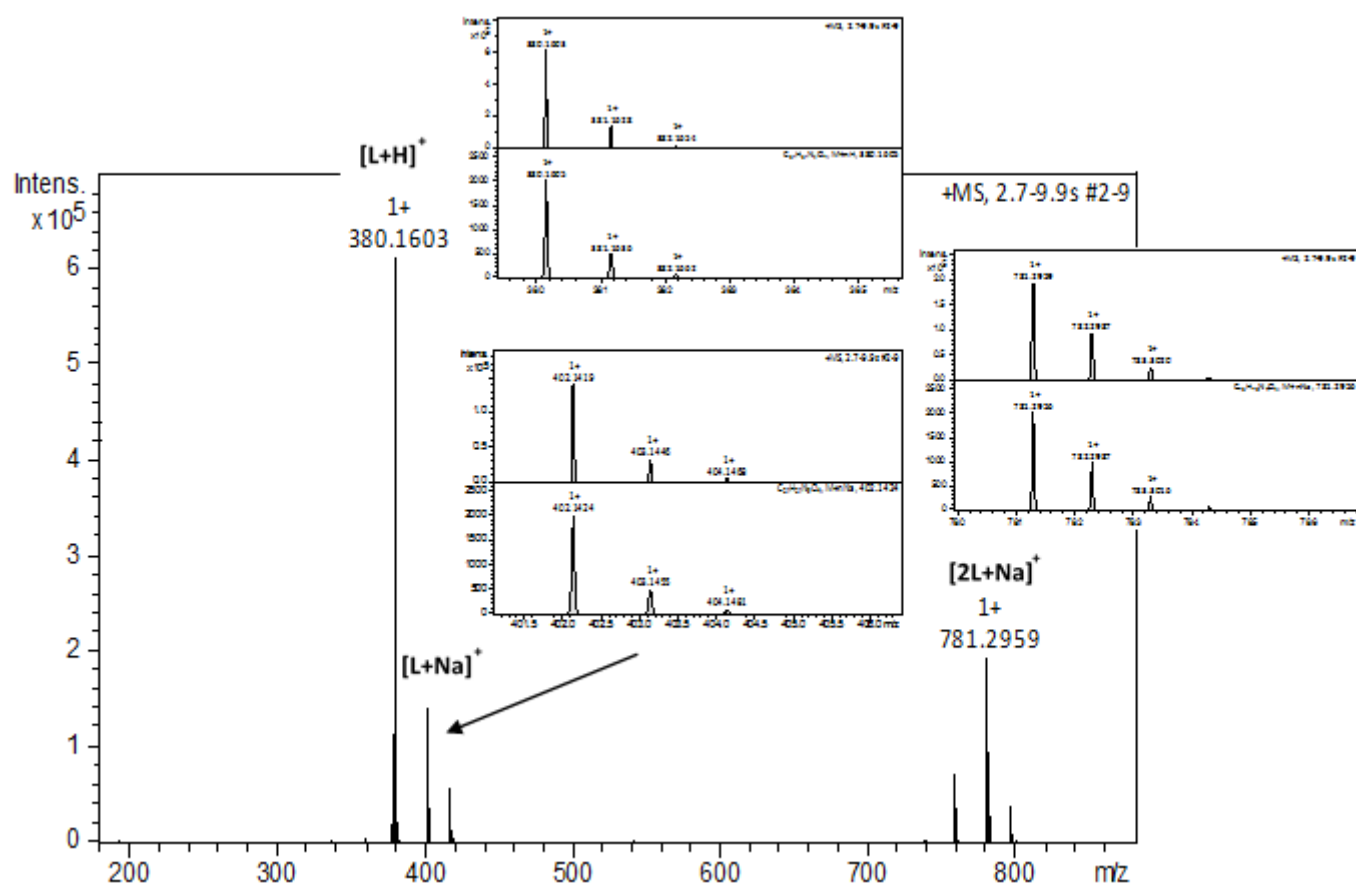

Table S5.

compound	MW	Quazi-molecular ion adduct	m/z
Substrat I	379	M+H	380
Fragmentation product	336	M+H	337
Fragmentation product	256	M+H	257
Fragmentation product	230	M+H	231
Fragmentation product	192	M+H	193
Fragmentation product	159	M+H	160
Fragmentation product	149	M+H	150

Scheme S1. The probable mechanism of G, H, I degradation in methanol solution, proposed on the basis of ESI-MS,(ad III, IV, V)
