

# Metabolomic identification of anticancer metabolites of Australian propolis and proteomic elucidation of its synergistic mechanisms with Doxorubicin in the MCF7 cells

Muhammad A Alsherbiny<sup>1,2</sup>, Deep Jyoti Bhuyan<sup>1</sup>, Ibrahim Radwan<sup>3</sup>, Dennis Chang<sup>1</sup>, Chun Guang Li<sup>1</sup>

<sup>1</sup>NICM Health Research Institute, Western Sydney University, Penrith, NSW, Australia

<sup>2</sup>Department of Pharmacognosy, Faculty of Pharmacy, Cairo University, Cairo, 11562, Egypt

<sup>3</sup>Faculty of Science and Technology, University of Canberra, ACT, Australia

## List of Supplementary tables

Table S1 Metabolomic-driven identified active metabolites of propolis samples against MCF-7 cells using UPLC-qTOF-MS and chemometrics.....	4
Table S2 Pearson's correlation of different DrugComb metrics and CI values at different inhibitory concentration .....	5
Table S3 Percentage of necrotic, apoptotic, and living cells retrieved from Annexin V-7AAD flowcytometry apoptosis analysis among propolis, doxorubicin and their mixture .....	5
Table S4 Human apoptosis array coordinates and corresponding proteins .....	6
Table S5 Significant apoptotic proteins in MCF-7 cell lysate upon treatment by doxorubicin, propolis or its synergistic combination..	7
Table S6 Reactome overrepresented pathways using dysregulated proteins in MCF-7 cells treated with the synergistic propolis and doxorubicin combination.....	9
Table S7 IMPala overrepresented pathways using dysregulated proteins in MCF-7 cells treated with the synergistic propolis and doxorubicin combination.....	10

## List of supplementary figures

Figure S1 Viability of RAW 264.7 and MCF10A cells upon treatment with AP-1 and PDOX55 along the dose-response curve of DOX against MCF10A cells. ....	11
Figure S2 Dose-response curves of (A) Australian propolis (Prop), doxorubicin (Dox) and most synergistic combinations (B) together with its combination index (CI) plot (C) calculated from CompuSyn software. ....	12
Figure S3 Emission spectra for Annexin V and 7-AAD using PerCP and Pacific blue channels ( <a href="https://www.biolegend.com/en-us/spectra-analyzer">https://www.biolegend.com/en-us/spectra-analyzer</a> ).....	13
Figure S4 Combined cell percentage analysis in different treatment groups in quadruplicates. Twenty-four hours treatment of propolis extract (100 $\mu\text{g mL}^{-1}$ ), Dox; doxorubicin (0.22 $\mu\text{g mL}^{-1}$ ), and their mixture at a half-dose synergistic combination (50 $\mu\text{g mL}^{-1}$ and 0.11 $\mu\text{g mL}^{-1}$ , respectively) with a negative control were implemented using antibodies against Annexin-V CF-Blue and the reporter 7AAD. ****; significantly different as derived from Two-way ANOVA and Tukey's multiple comparisons at $P < 0.001$ , $n = 4$ . .	13
Figure S5 Supervised PLS-DA and Unsupervised PCA multivariate data analysis of the apoptotic proteins of MCF-7 lysates analysed by Proteome profiler human apoptotic array kit. (A) Score plot of principal component analysis (PCA) between the selected principal components alongside the explained variances shown in brackets. (B) Score plot of partial least square discriminant analysis (PLS-DA) where third averaged point was imputed for each treatment, (C and D) are the most discriminatory proteins in among different	

treatments identified by variable importance projection (VIP) score and coefficients of PLS-Da model, respectively. The coloured boxes on the right indicate the relative concentrations of the corresponding metabolite in each group under study. ....	14
Figure S6 Reactome downloaded TP53 transcription regulation pathway (A), TP53 transcriptional regulation of DNA repair genes with the enriched genes of BRCA1 and MCD1 marked by an orange star. ....	15
