

Figure S4: Left: Fold caspase-3/7 activity of melanoma cell line A375 after 4 h of incubation with 10 and 20 μ M of peptide RDP215 and 9D-RDP215 indicating increased killing by early apoptosis by RDP215 compared to the L-peptide. Right: Fold caspase-3/7 activity of glioblastoma cell line LN-229 after 2 h of incubation with 5 and 10 μ M of peptide RDP215 and 9D-RDP215 only indicating killing by early apoptosis by RDP215. Mean values represent data of at least three independent experiments.
