

## Supplementary Material

**Table S1.** Changes in total cell wall material (AIR) content and pectins and hemicellulose fractions during the shelf-life period of Chilean strawberry fruit subjected to H<sub>2</sub>S treatment. The content of uronic acids (UA) of water-soluble (WSF), CDTA-soluble (CSF) and Na<sub>2</sub>CO<sub>3</sub>-soluble (NSF) pectin fractions and neutral sugars (NS) of KOH-soluble (KSF) fraction (hemicellulose) are indicated.

Data indicate the mean of three replicates ± S.D. Different letters indicate significant differences between treatments at each day ( $p \leq 0.05$ ). FW, fresh weight.
