

Figure S7. Thermostability of 1018-K6 monitored by spectroscopic techniques. CD and fluorescence spectra of 1018-K6 at 50 μ M concentration were recorded in water at (A) 4 $^{\circ}$ C, (B) 37 $^{\circ}$ C and (C) 90 $^{\circ}$ C, respectively, in the presence of 150 mM SDS up to 48 h incubations. The spectra of peptide samples in absence of SDS (blue lines) were also reported. The spectra were recorded at t=0 (magenta lines), t=24 h (green lines) or t=48 h (purple lines).
