Figure 9a. Final configurations of systems whose sites interact with the attractive square well potential. NVT simulations on chains ($SW = 1.2$, $\sigma = 1.15$, $N = 12$, $N_{ch} = 100$, $\beta = 0.05$). Sites are colored according to the CCE norm: Blue, red, green, cyan, and purple correspond to sites with HCP, FCC, FIV, BCC, and HEX similarity, respectively.
