

Supplemental Figure. 1

Supplemental Fig. 1 The acetylation levels of H3K9 and H3K122 were not changed around the upstream region of the hypertrophic response gene promoters

(A-F) ChIP assays were performed using cardiomyocyte lysates treated with or without PE for 0, 15, 60, or 240 min with anti-acetyl-histone H3K9 antibody (A-C), anti-acetyl-histone H3K122 antibody (D-F), or normal rabbit IgG as a negative control (not detected). N=3 to 4; *one-way* ANOVA followed by Tukey test. * $p < 0.05$.

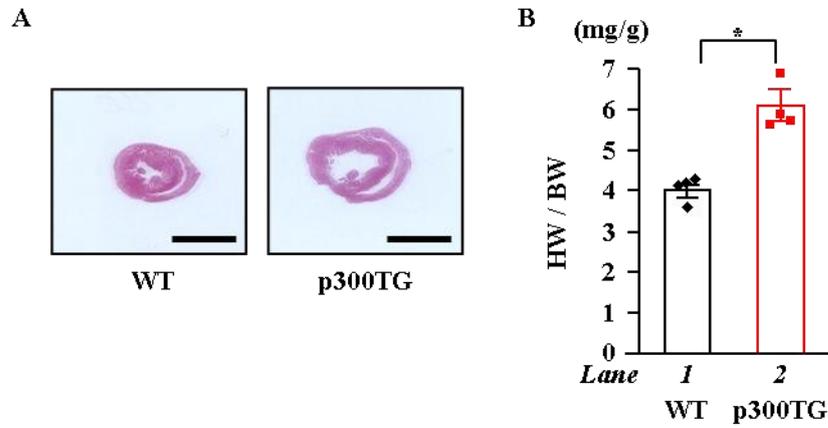

Supplemental Figure. 2

Supplemental Fig. 2 Curcumin treatment inhibited cardiomyocyte hypertrophy

Primary cultured neonatal rat cardiomyocytes were treated with curcumin (10 μ M) for 2 hours, then with PE (30 μ M), as described in Fig. 2. **(A and B)** Immunofluorescence staining was performed with anti-MHC antibody. The areas of 50 randomly-chosen cells were measured using ImageJ v4.16. **(A)** is representative photographic image of cardiomyocytes, and **(B)** is a quantification of **(A)**. Scale bar: 20 μ m. **(C-E)** mRNAs were extracted from the cardiomyocytes, and mRNA levels of **(C)** ANF, **(D)** BNP, and **(E)** β -MHC were measured by qRT-PCR assay. **(B-E)**, N=3; *one-way* ANOVA followed by Tukey test. * $p < 0.05$

Supplemental Figure. 3

Supplemental Fig. 3 Cardiac hypertrophy was observed in TG mice with cardiac overexpression of p300

(A) The hearts of p300-TG mice were subjected to hematoxylin eosin staining at 26 weeks of age. Scale bar: 5 mm. (B) Heart weight / body weight (HW/BW) ratios at 26 weeks of age. (B), N=4; unpaired t-test.

* $p < 0.05$

Supplemental Table 1

Stage	LVH		HF	
Parameter	DR 12w	DS 12w	DR 21w	DS 21w
LVPWd (mm)	2.2 ± 0.3	3.2 ± 0.3*	2.4 ± 0.2	3.4 ± 0.3 [†]
IVSd (mm)	1.9 ± 0.2	2.6 ± 0.3*	1.8 ± 0.3	3.0 ± 0.3 ^{†‡}
LVIDd (mm)	6.3 ± 0.4	5.7 ± 0.6	7.1 ± 0.2	6.9 ± 0.5
IVIDs (mm)	2.7 ± 0.4	2.2 ± 0.6	3.1 ± 0.2	4.6 ± 0.4 ^{†‡}
FS (%)	57.8 ± 5.5	62.9 ± 6.9	57.1 ± 4.0	34.2 ± 5.2 ^{†‡}

Supplemental Table 1. The data of echocardiography from salt resistant and sensitive Dahl rats
Abbreviations: LVH, Left ventricular hypertrophy, HF, Heart failure; DR, Dahl salt-resistant rat; DS, Dahl salt-sensitive rat; LVPWT, Left ventricular posterior wall thickness; IVSd, Interventricular septum thickness at end-diastole; LVIDd, left ventricular internal diameter at end diastole; IVIDs, left ventricular internal diameter at end systole; FS, Fractional shortening. N=4; two-way ANOVA followed by Tukey test. * $p < 0.05$ DR 12w vs DS 12w, [†] $p < 0.05$ DR 21w vs DS 21w, [‡] $p < 0.05$ DS 12w vs DS 21w
