

Figure S1. Donor chimerism at five weeks after BMT. Hematopoietic chimerism on blood was measured by Flow cytometric analysis five weeks post BMT. Anti-H-2b (AF6-88.5) and H-2d (SF1-1.1) antibodies were sourced by BioLegend (San Diego, CA, USA). Mean \pm SD is shown. N = 6.

Table S1. Blood counts at five weeks after BMT.

White blood cells (per μ L)	Hemoglobin (g/dL)	Platelets (per μ L)
8376 \pm 3397	16.2 \pm 1.0	133.3 \pm 21.5

Mean \pm SD is shown. N = 21.
