

## Supplementary file 1: Tables

**Table S1.** Fold changes of gene expression in pleura and lung of mice exposed to Mitsui-7 (Mit-7) or NM-401. Statistical analysis was performed in R using means of linear regression, adjusted for total exposure time and sex ( $n = 19$ ). High dose (HD), low dose (LD).

## Supplementary file 1: Figures

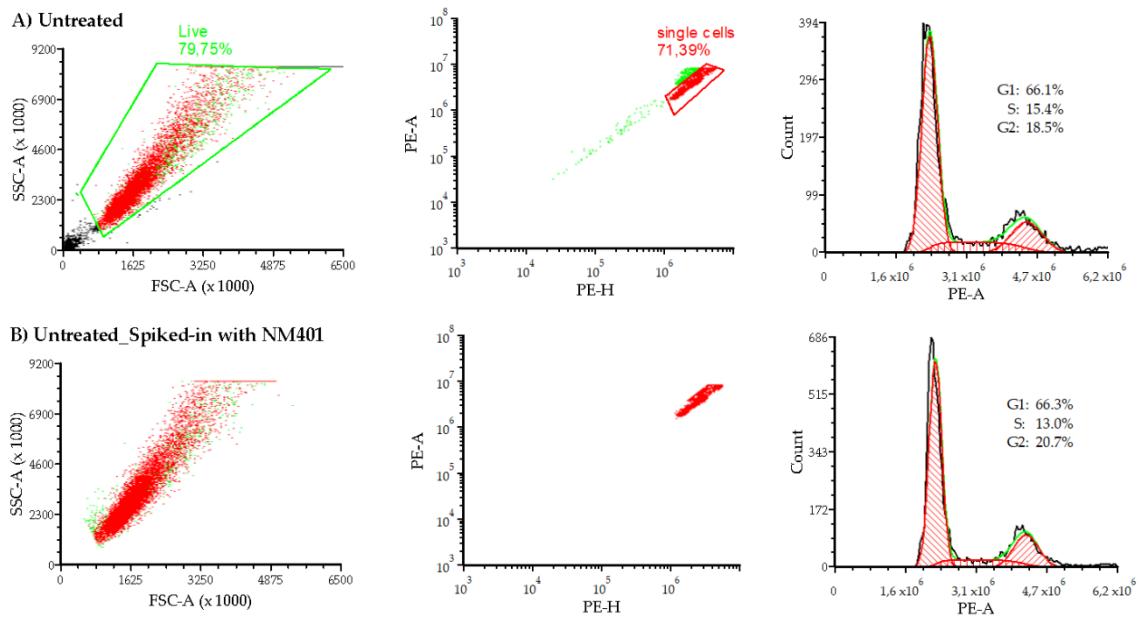

**Figure S1.** Body weight gain of animals after intrapleural injection of MWCNT. Body weight normalized to each animal at time 0. High dose (HD), Mitsui-7 (Mit-7). Values are mean  $\pm$  SEM ( $n = 19$ ).

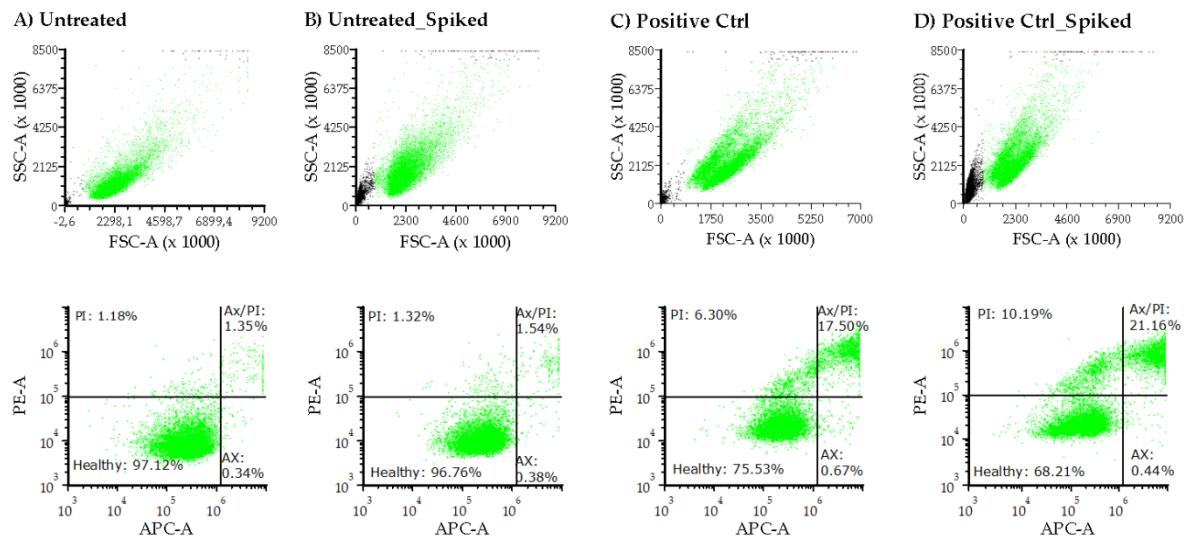

**Figure S2.** Heatmap illustrating selected genes involved in fibrosis and inflammation. Selected genes were run following NM-401 exposure in HBEC-3KT and Met-5A cells. Data presented as mean values of merged data from all weeks for low dose (LD): 0.96  $\mu\text{g}/\text{cm}^2$  and high dose (HD): 1.92  $\mu\text{g}/\text{cm}^2$  ( $n = 6$ ).

**Figure S3.** Cell proliferation and LDH release of exposed cells to NM-401. Cell count for HBEC-3KT cells (A) and Met-5A cells (B) for control and exposed cells assessed by trypan blue assay presented after 1, 4, 8 and 13 weeks of exposure. c) LDH assay was assessed after 4, 8 and 13 weeks of exposure. Control (Ctrl), low dose (LD): 0.96  $\mu\text{g}/\text{cm}^2$  and high dose (HD): 1.92  $\mu\text{g}/\text{cm}^2$ . Data indicates mean $\pm$ SEM ( $n = 2$ ).

**Figure S4. Assessment NM-401 nanoparticle interference with cell cycle analysis using flow cytometry.** Representative scatter plots and histogram of untreated cells (A) and untreated cells spiked with high-dose of NM-401 (B).

**Figure S5. Assessment NM-401 nanoparticle interference with the analysis of apoptosis by flow cytometry.** Representative scatter plots of untreated cells (A), untreated cells spiked with high-dose of NM-401 (B), positive control (Ctrl) i.e., cells heat shocked at 56°C for 5 min (C) and positive control spiked with high-dose ( $HD = 1.92 \mu\text{g}/\text{cm}^2$ ) of NM-401 (D). PI: propidium iodide and AX: Annexin-V.
