

Figure S1. Effects of HGF and EGF on mRNA expression of *UCK1*, *UCK2*, *RRM1*, *RRM2*, and *RRM2B*. HepG2 cells were cultured for 24 h in serum-starved medium, and incubation was continued after addition of HGF (50 ng/mL) or EGF (50 ng/mL) for the indicated period. Thereafter, total RNA was extracted. The transcription levels of *UCK1* (A), *UCK2* (B), *RRM1* (C), *RRM2* (D), and *RRM2B* (E) are expressed as a percentage of that in cells not treated with growth factors at 0 h. Each bar represents the mean \pm SD of 5 experiments.
