

Supplementary Data

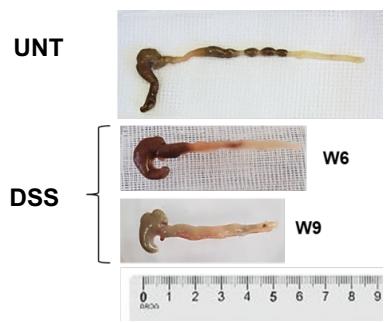

List of murine and human primers

Species	Gene	Forward Primer (5'>3')	Reverse Primer (5'>3')
<i>mus musculus</i>	Col3a1	GCCCACGCCTTCTACAC	CCAAGCTCGGTACACTGACA
	E-cad	CAGCCGGTCTTGAGGGATT	GGTAACCTCTCGGTCCAGC
	Fn1	AAGAGGTTGTGACTGTGG GC	ATGGCGTAATGGGAAACC GT
	Il-6	CAAGTCGGAGGCTTAATTACACATG	TGCCATTGCACAACCTTTCCCT
	Mmp9	TGTCTGGAGATTGACTTGAAGTC	TGAGTTCCAGGGCACACCA
	Rpl32	TGTGCAACAAATCTTACTGTGCT	TGCACACAAGCCATCTACTCA
	Snail	GCGGAGTTGACTACCGACC	GAAGGTGAAC TCCACACACCG
	Tgf β 1	TGGCGATACCTCAGCAACC	CTCGTGGATCCACTTCCAG
	Tnf- α	CAGACCCTCACACTCCAGATCATCTT	CCACTTGGTGGTTGCTACGA
	Vim	AGACCAGAGATGGACAGGTGA	TTGCGCTCCTGAAAAACTGC
<i>homo sapiens</i>	α Sma	ACCATTGGAAACGAACGCT	TTTCGTGGATGCCCGCTG
	ADAM19	GCAATGCCTCTAATTGTACCCCTG	GAGCCAACAGCTTACACTGG
	COL1A1	TGATGGGATTCCCTGGACCT	TCCAGCCTCTCCATCTTGC
	COL3A1	TCGAGGCAGTGATGGTCAAC	GGTCCAAC TT CACCCTTAGCA
	COL4A1	GGTGTGCAGGAGTGCCAG	GCAAGTCGAAATAAAACTCACCAG
	CTGF	AGGAGTGGGTGTGTGACGA	CCAGGCAGTTGGCTCTAATC
	FAP	CCCACGCTCTGAAGACAGAA	AGTTATGAAC TCTGAAGGGCGT
	FN1	AGACCATACCTGCCGAATGTAG	GAGAGCTTCCCTGTCTGTAGAG
	GAPDH	GAAATCCCCTCACCATCTTCCAGG	GAGCCCCAGCCTCTCCATG
	ITGB3	CATGGATTCCAGCAATGT CCTCC	TTGAGGCAGGTGGCATTGAAGG
	SERPINE1	CACAAATCAGACGGCAGCAC	GGCGTGGTGAAC TCA GTATAG
	SNAIL	CTCTAGGCCCTGGCTGCTA	AGTGGGGACAGGAGAAGGG
	THBS1	GCTGGAAATGTGGTGTCTGTCC	CTCCATTGTGGTTGAAGCAGGC
	ZNF281	GCCATCCTCTCCCCAAGTC	GAGCTTCGAAAGCAGCACTA
	α SMA	CCGACCGAATGCAGAAGGA	ACAGAGTATTGCGCTCCGAA

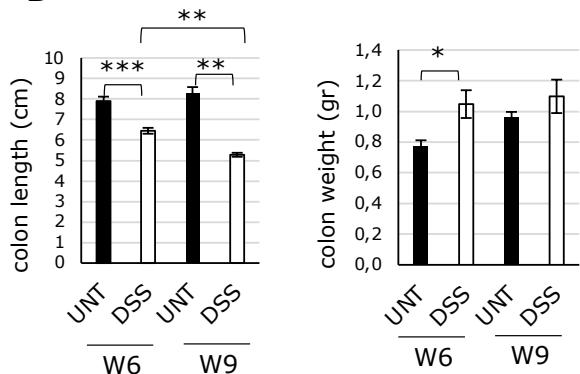

Supplementary Figures and Tables

Supplementary Figures

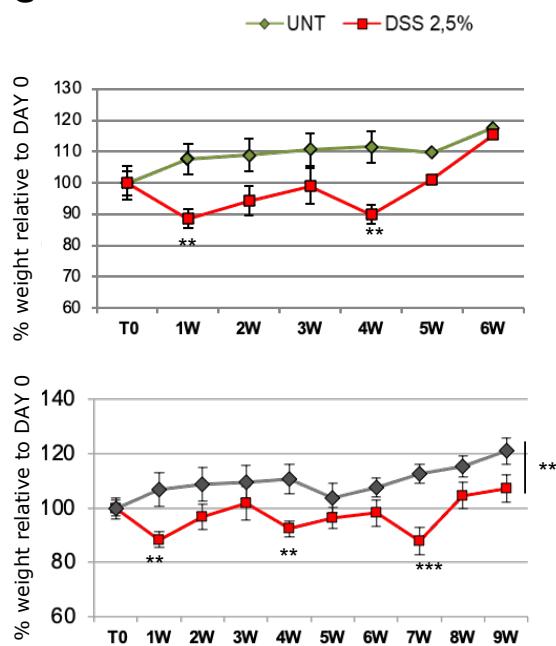

A

B

C

D

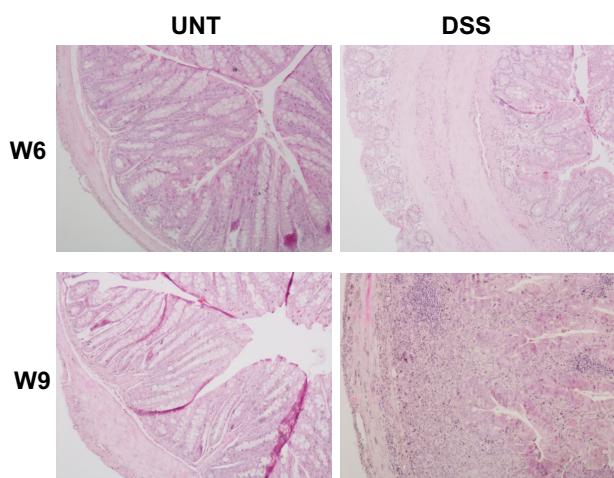

Figure S1. C57BL/6J male mice were subjected to cycles of 2.5% DSS (dextran sulfate sodium) for 2 weeks followed by 1 week of recuperation to establish mice intestinal fibrosis model. DSS-treated mice were sacrificed at 6 (DSS W6; n=8) and 9 weeks (DSS W9; n=5) of treatment along with untreated controls (UNT; n=8). To verify the progression of chronic intestinal inflammation and fibrosis, colon length and weight (A and B), body weight (C) were measured. Hematoxylin and Eosin staining (D) confirmed that DSS successfully induced chronic intestinal fibrosis. Data are expressed as mean \pm SEM. * = p-value \leq 0.05; ** = p-value \leq 0.01; *** = p-value \leq 0.001

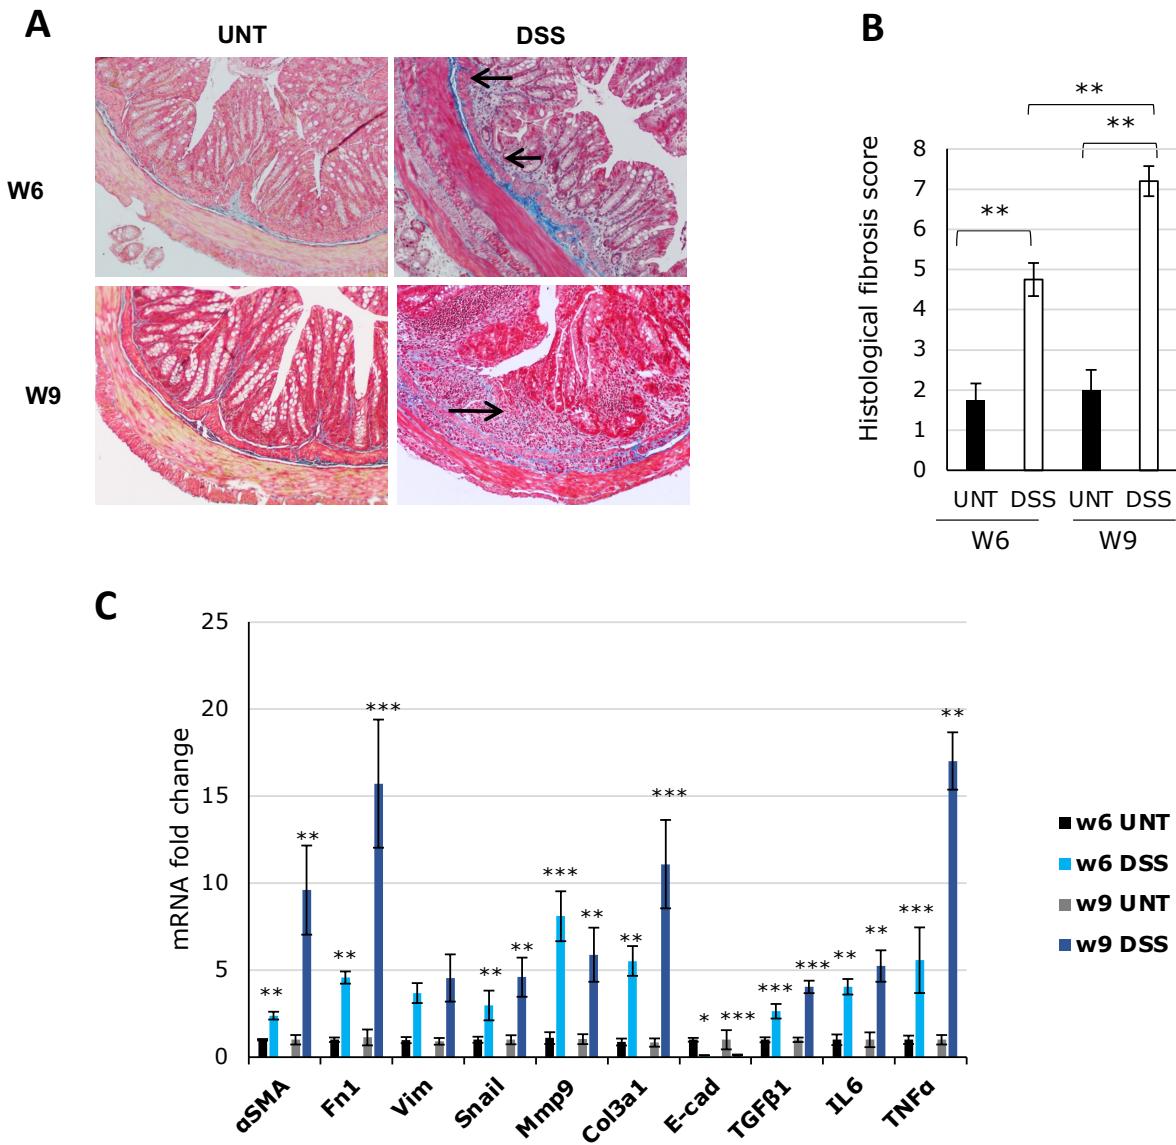

Figure S2. Masson's trichrome stain was assessed on murine colon sections (A, *black arrows* indicate collagen fiber deposition) and histological fibrosis scoring was calculated (B). mRNA expression analysis of fibrosis and inflammation markers by qRT-PCR confirmed occurrence of intestinal fibrosis. UNT, untreated animals; DSS, dextran sulfate sodium; W6, week 6 of treatment; W9, week 9 of treatment. Data are expressed as mean \pm SEM. * = p -value \leq 0.05; ** = p -value \leq 0.01; *** = p -value \leq 0.001

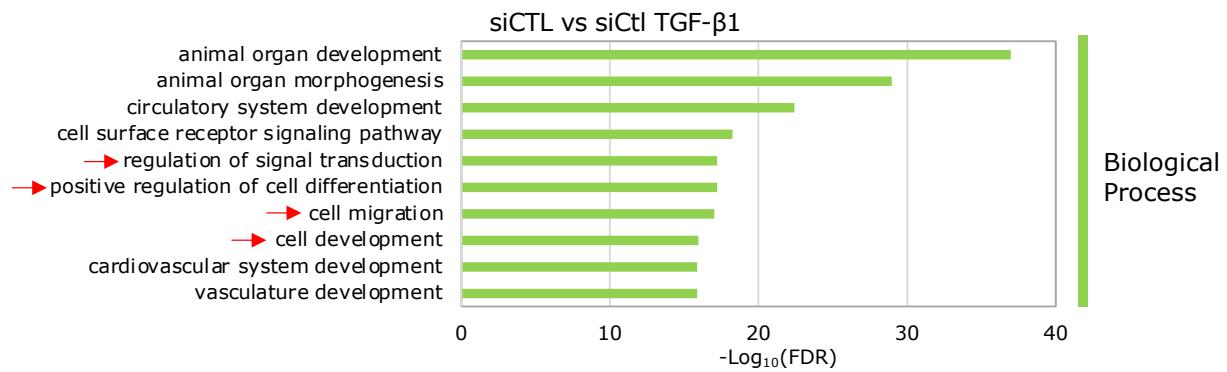

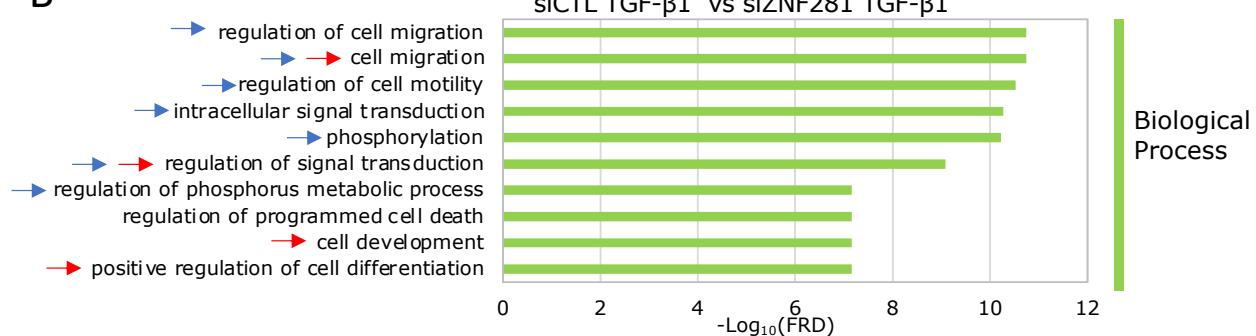

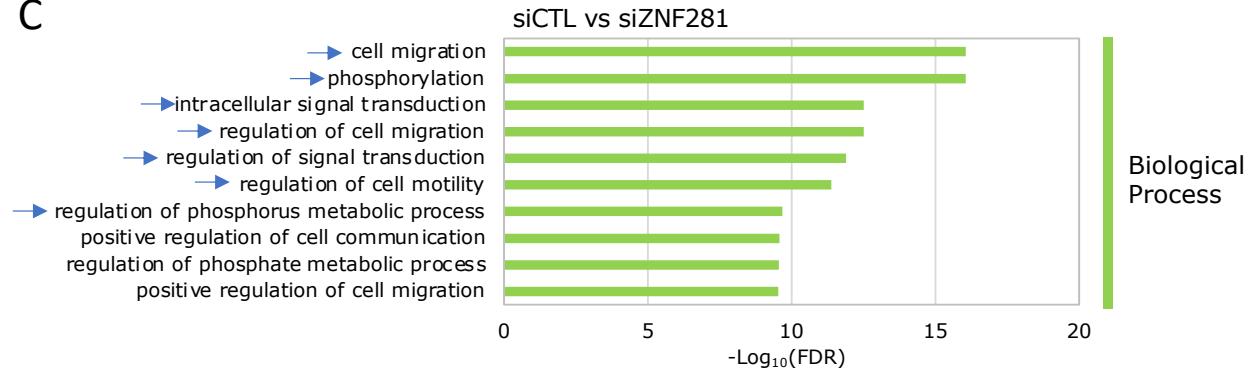

A**B****C**

Figure S3. Top-10 Gene Ontology (GO) terms enriched in DEGs between siCtl and siCtl TGF β 1 (A), siCtl TGF β 1 and siZNF281 TGF β 1 (B) and siCtl and siZNF281 (C) treated cells in the Biological Process (BP) category. Red arrows indicated GO terms shared between A and B; blue arrows indicated GO terms shared between B and C.

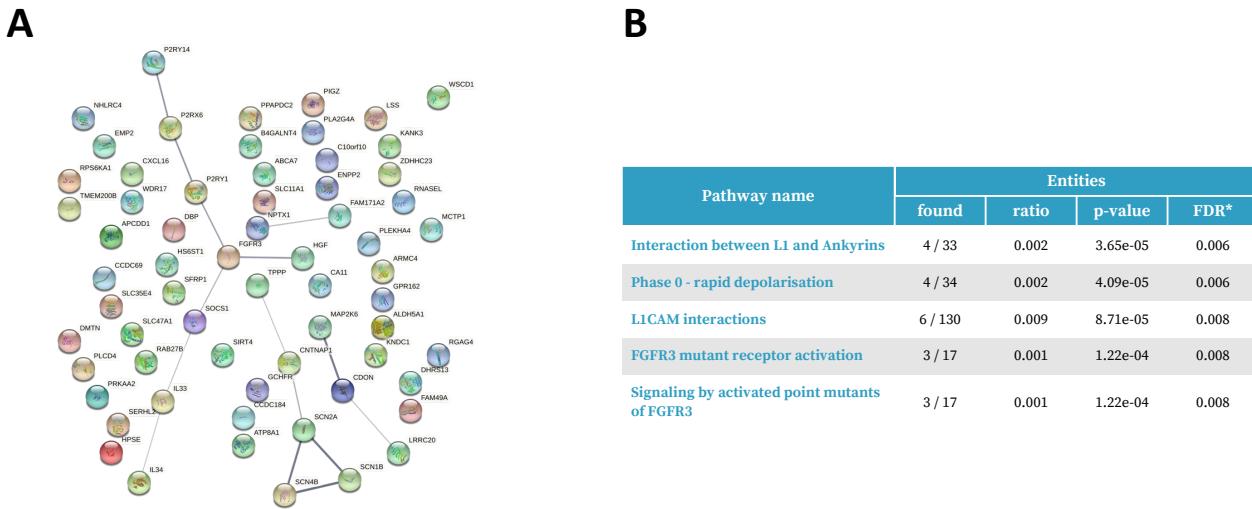

Figure S4. Functional analysis of 71 genes from Group 2m, downregulated by TGF β 1 via ZNF281. Protein-protein interaction (PPI) network was built by STRING (<https://string-db.org>). The edges indicate both functional and physical protein associations (A). Biological pathway enrichment was performed using Reactome (<https://reactome.org>) (B).

Supplementary Tables

Table S1. Differentially expressed genes (DEGs) between CCD18-Co cells exposed to TGF β 1 (siCtl TGF β 1) or not (siCtl), after ZNF281 silencing (siZNF281; siZNF281 TGF β 1), as assessed by RNA-sequencing (adj P-value < 0.05, log2FC >1.0)

Table S2. Gene Ontology (GO) term enrichment analysis of DEGs between siCtl and siCtl TGF β 1 treated cells (FDR< 0.05).

Table S3. GO term enrichment analysis of DEGs between siCtl TGF β 1 and siZNF281 TGF β 1 treated cells (FDR< 0.05).

Table S4. GO term enrichment analysis of DEGs between siCtl and siZNF281 treated cells (FDR< 0.05).

Table S5. GO term enrichment analysis of DEGs belonging to Group 2 (FDR< 0.05).

Table S6. GO term enrichment analysis of DEGs belonging to Group 1 and 3 (FDR< 0.05)

Table S7. Genes belonging to Group 2 including genes on which ZNF281 silencing and TGF β 1 treatment have opposite effects. ZNF_log2_FC, log2 fold-change in siCtl vs siZNF281; ZNF_Adj_p-value, adjusted p-value in siCtl vs siZNF281; TGF_log2_FC log2 fold-change in siCtl vs siCtl TGF β 1; TGF_Adj_p-value, adjusted p-value in siCtl vs siCtl TGF β 1.

Table S8. GO term enrichment analysis (FDR< 0.05) of 102 genes up-regulated by TGF β 1 (siCtl vs siCtl TGF β 1) and downregulated when ZNF281 was silenced (siCtl vs siZNF281) (adj P-value < 0.05, log2FC >1.0).
