

Figure S1. Calcein/PI labeling of ECs incubated for 12 h with 5 μM Stattic and 25 μM AG490 (12-well plate) or 1.25 μM Stattic and 12.5 μM AG490 (transwell) demonstrating that these concentrations are sub-lethal. High dose DMSO was used as a positive (cell death) control. Scale bar, 100 μm .
