

Supplementary Data

Drp1 Overexpression Decreases Insulin Content in Pancreatic MIN6 Cells

Uma D. Kabra ^{1,2}, Noah Moruzzi ³, Per-Olof Berggren ³ and Martin Jastroch ^{4,*}

Supplementary Figure S1: Less exposed immunoblot of OXPHOS complexes of Figure 2E.

Supplementary Figure S2: Effect of an unrelated protein on insulin content. MIN6 cells were transiently transfected using p-ENTR_RIP-GFP. A. Insulin content expressed at ng of DNA. Data are represented as mean \pm SEM (n=4) and n-values represent independent experiments. B. Representative microscopic image of GFP expression.
