<sup>a</sup> Results of three independent experiments are presented

<sup>b</sup> SE is the standard error calculated according to equation:  $SE = s/\sqrt{3}$ , where  $s$  is the standard deviation

### Boron Accumulation Assay

Boron accumulation in U87 MG, MDA-MB-231, SK-Mel-28, DU 145, T98G, and BJ-5ta cells was assessed after incubation in the presence of compounds **3a** and **3b** (0.25 mg/mL in the case of U87 MG cells; 0.5 mg/mL in other cases) for 10 min, 30 min, 1 h, 3 h, 6 h and 8 h. For analysis, 1 mL of the medium was taken, the number of cells was determined on a Countess automatic cell counter (Invitrogen, Waltham, MA, USA) and the boron content was analyzed using ICP-OES as described in [Tsygankova, A.R.; Kanygin, V.V.; Kasatova, A.I.; et al. Determination of boron by inductively coupled plasma atomic emission spectroscopy. Biodistribution of  $^{10}\text{B}$  in tumour-bearing mice. *Russ. Chem. Bull.* **2020**, *69*, 601–607. <https://doi.org/10.1007/s11172-020-2805-8>]. The relative standard deviation (RSD) did not exceed 25% for the determination of boron by the ICP-AES method. Results of three independent experiments are presented.
