# Supporting Information

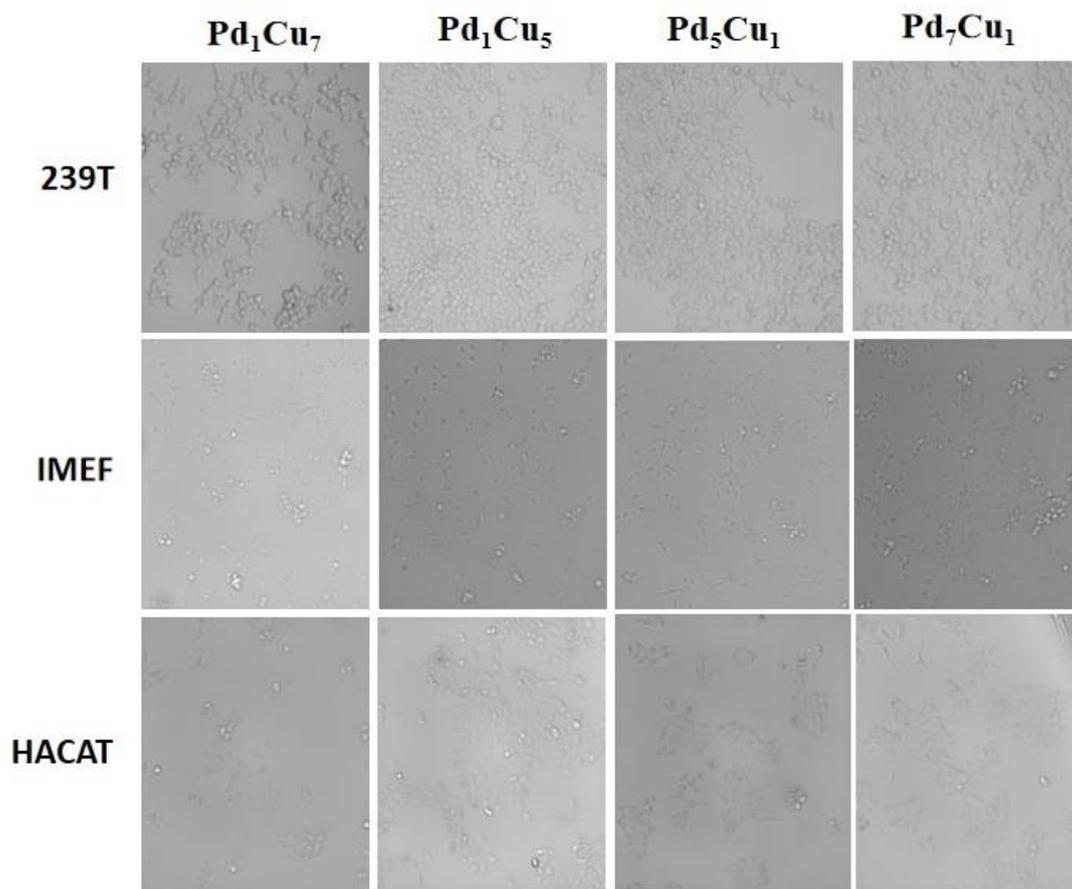

**Figure. S1.** TEM images and size distribution histogram of the Pd-Cu alloy NPs with different precursor ratios.

# Supporting Information

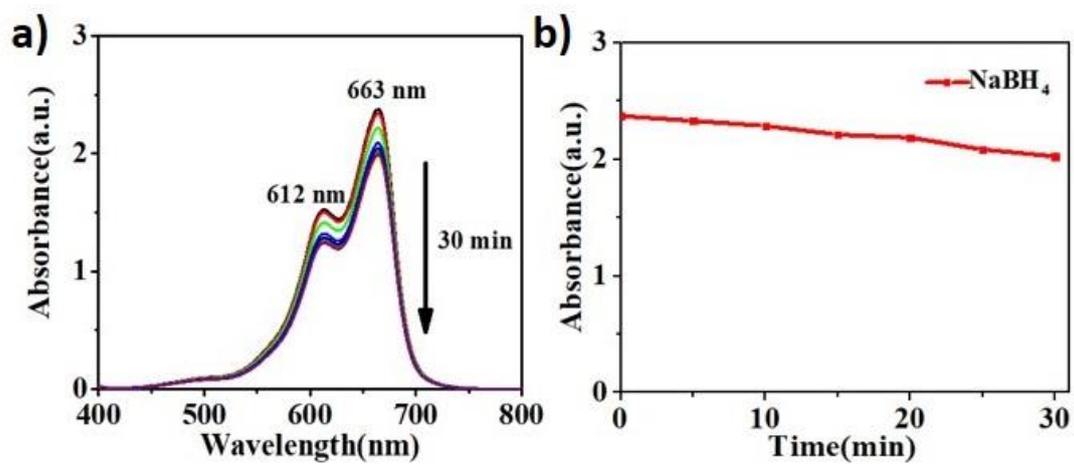

**Figure. S2.** UV-*vis* images and colloidal states of the Pd-Cu alloy NPs with different precursor ratios.

## *Supporting Information*

**Figure. S3.** Representative light microscopy images of 239T cell, IMEF cell, HACAT cell, which were treated by using  $50 \mu\text{g mL}^{-1}$  colloidal solutions ( $\text{Pd}_1\text{Cu}_5$ ,  $\text{Pd}_1\text{Cu}_7$ ,  $\text{Pd}_5\text{Cu}_1$ ,  $\text{Pd}_7\text{Cu}_1$  alloy NPs).

## Supporting Information

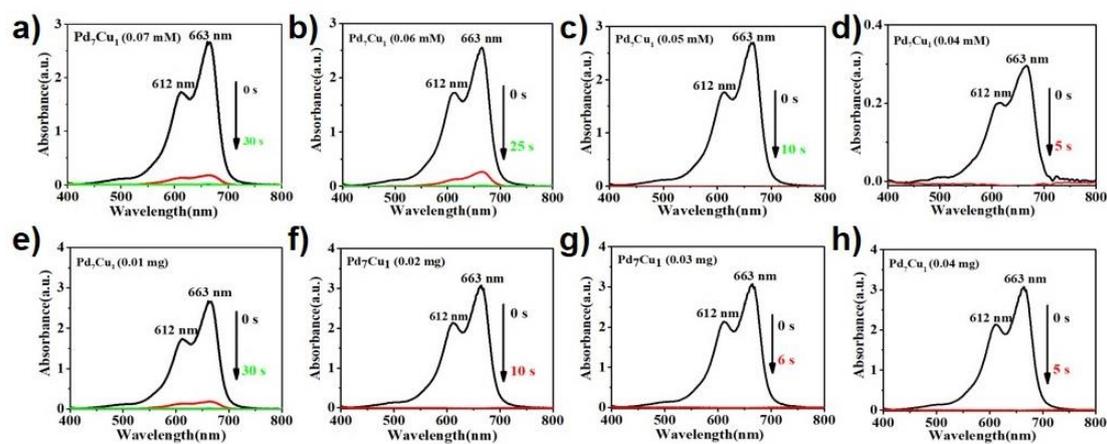

**Figure. S4.** a) Absorption spectra of MB in the presence of 0.1 mL of 0.2 M NaBH<sub>4</sub>.  
b) Absorption spectra recorded at 400 nm was affected by time.

## *Supporting Information*

**Table S1:** The concentration of substrate MB was controlled at 0.07 mM, and the content of catalyst was controlled at 0.01 mg. The influence of different catalysts on the reaction rate was compared, and the result was represented by  $K_{app}$ , and the higher the value of  $K_{app}$ , the faster the reaction rate.

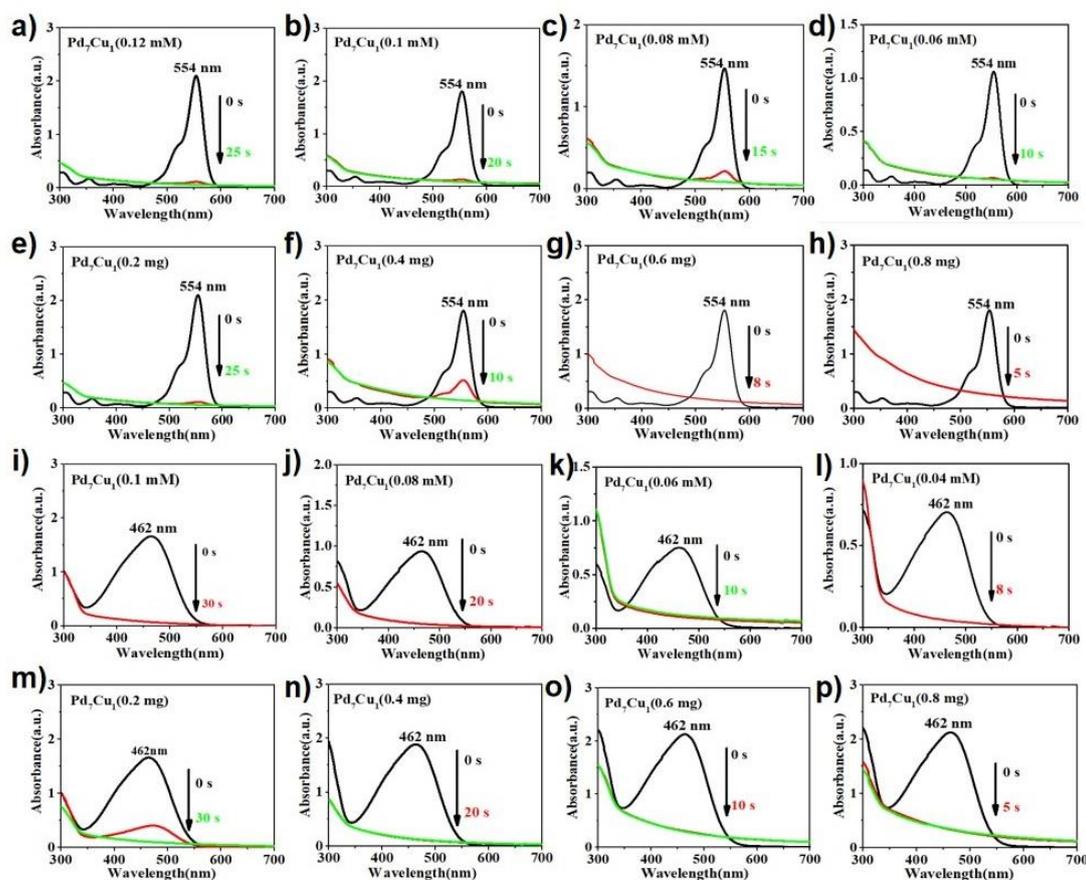

| Samples                         | Reduction time(s) | Apparent rate constant ( $K_{app}$ , $10^{-3} s^{-1}$ ) | Activity parameter ( $K$ , $s^{-1} g^{-1}$ ) |
|---------------------------------|-------------------|---------------------------------------------------------|----------------------------------------------|
| Pd <sub>1</sub> Cu <sub>1</sub> | 270               | 12.9                                                    | 1290                                         |
