Supporting Information

Table of contents

Figure S1: ¹H NMR spectrum (D₂O, 25°C, 500 MHz) of compound **1** (page S2).

Figure S2: Overlaid ¹H-¹⁵N HSQC full-spectra of 0.1 mM cytochrome *c* in the absence or in the presence of 0.1–3.1 mM **1** (page S2).

Figure S3: Gel formation observed during crystallization tests for the cytochrome *c* - **1** complex (page S3).

Figure S1: ¹H NMR spectrum (D₂O, 25°C, 500 MHz) of compound **1**.

Figure S2: Overlaid ¹H-¹⁵N HSQC full-spectra of 0.1 mM cytochrome *c* in the absence (black contours) or presence of 0.1–3.1 mM **1** (blue scale).

Figure S3: Gel formation observed during crystallization tests for the cytochrome c - **1** complex performed by **a)** a robot sitting drop and **b)** manual hanging drop vapor diffusion method (1.7 mM protein, 10 mM ligand). The reservoir solutions were **a)** 20% PEG 6000, 1M LiCl, 100mM sodium citrate buffer (pH 4) and **b)** 25% PEG 8000, 50mM sodium citrate buffer (pH 5).
