

Supplementary Figure S1

A Differentiated WT mIECs

B Differentiated Winnie mIECs

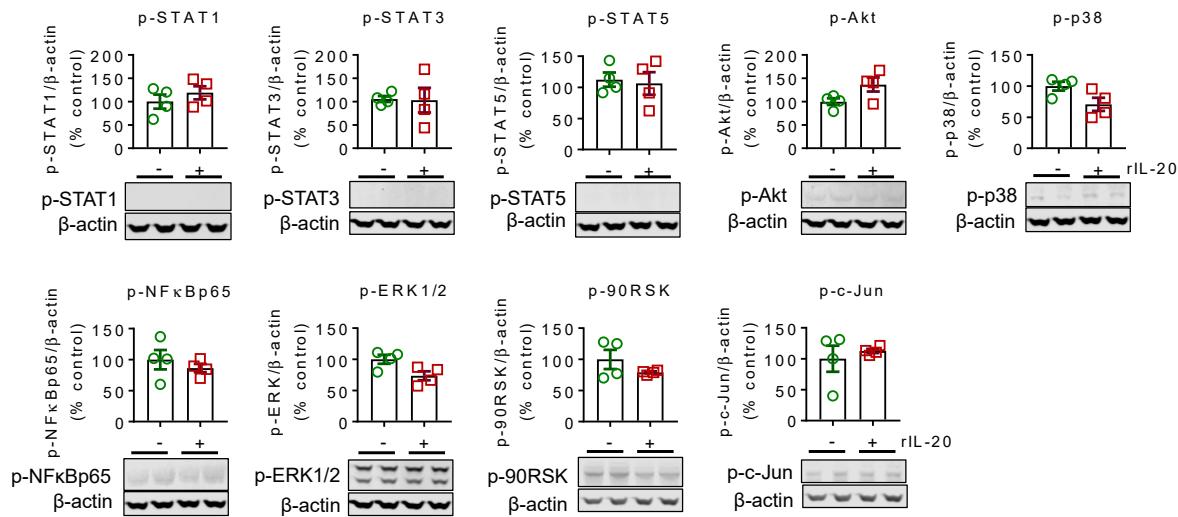

Figure S1: rIL-20 specific modulation of signalling pathways in differentiated primary intestinal epithelial cells. DAPT treated primary colonic organoids from C57BL/6 (A) and Winnie (B) were analysed for phosphorylated STAT1, STAT3, STAT5, Akt, p38, NF- κ Bp65, ERK1/2, 90-RSK, and p-c-Jun by Western blot assay after treatment with rIL-20 (100 ng/mL) for 1 h. Data are presented as mean \pm SEM with individual cultures from 3-4 independent experiments (non-parametric Man-Whitney t-test).

Supplementary Figure S2

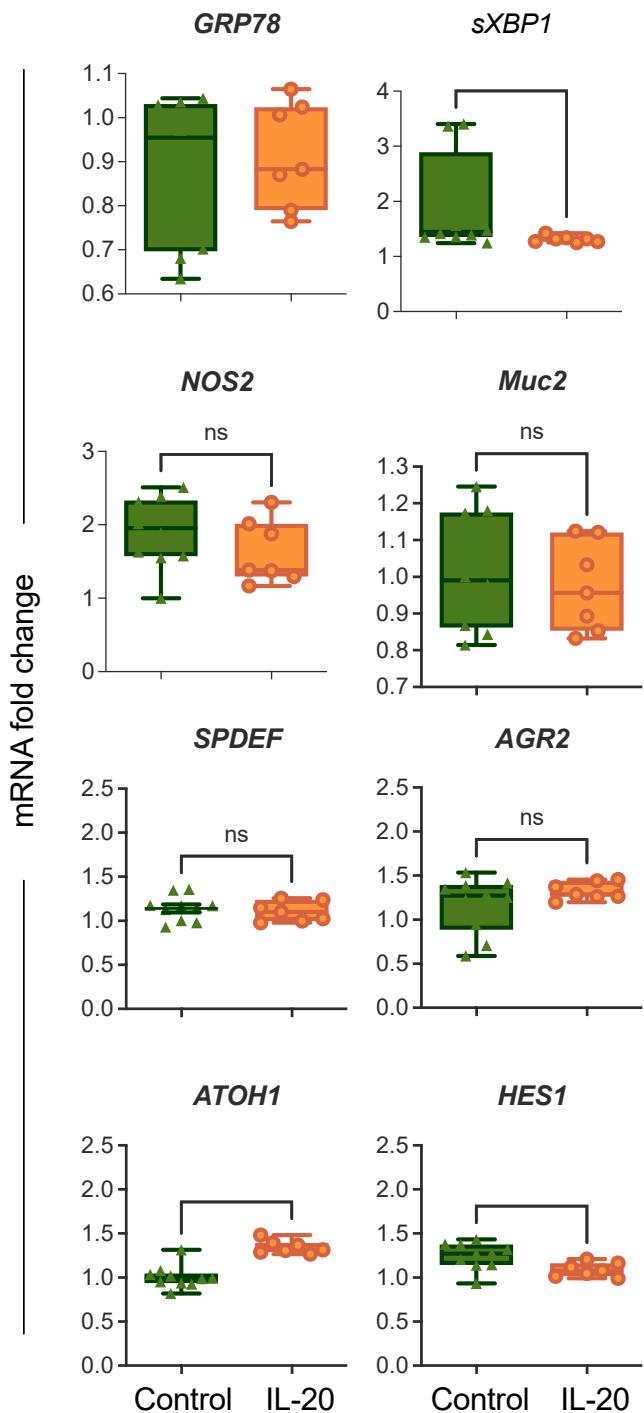

Figure S2: Intestinal cellular stress and differentiation markers in the rIL-20 treated LS174T cells. Relative mRNA expression levels of ER stress, goblet cell and intestinal stem cell inducing transcriptional factors measured by qRT-PCR in the LS174T cells treated with vehicle (PBS) or IL-20 (100 ng/mL) for 24 h. Data are presented as mean \pm SEM (n=7-9), compared with PBS controls, student's t-test.

Supplementary Figure S3

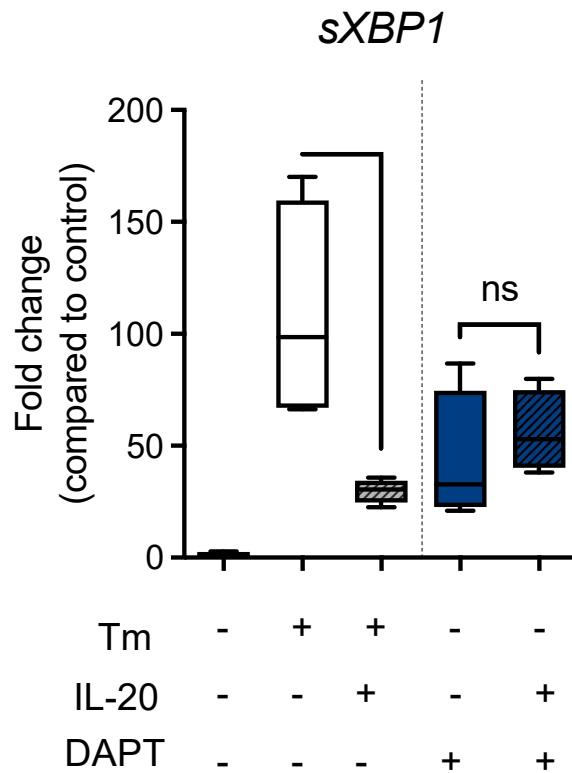

Figure S3: rIL-20 modulates cellular ER stress in LS174T cell lines. Undifferentiated and differentiated LS174T cell lines were co-treated with 10 μ M tunicamycin (6 h) and rIL-20 (100 ng/mL) for 24 h and analysed for cellular stress marker, *sXBP1* by qRT-PCR. Data are presented as mean \pm SEM (n=12), *P<0.01, one-way ANOVA followed by Dunnett's post hoc test.

Supplementary Figure S4

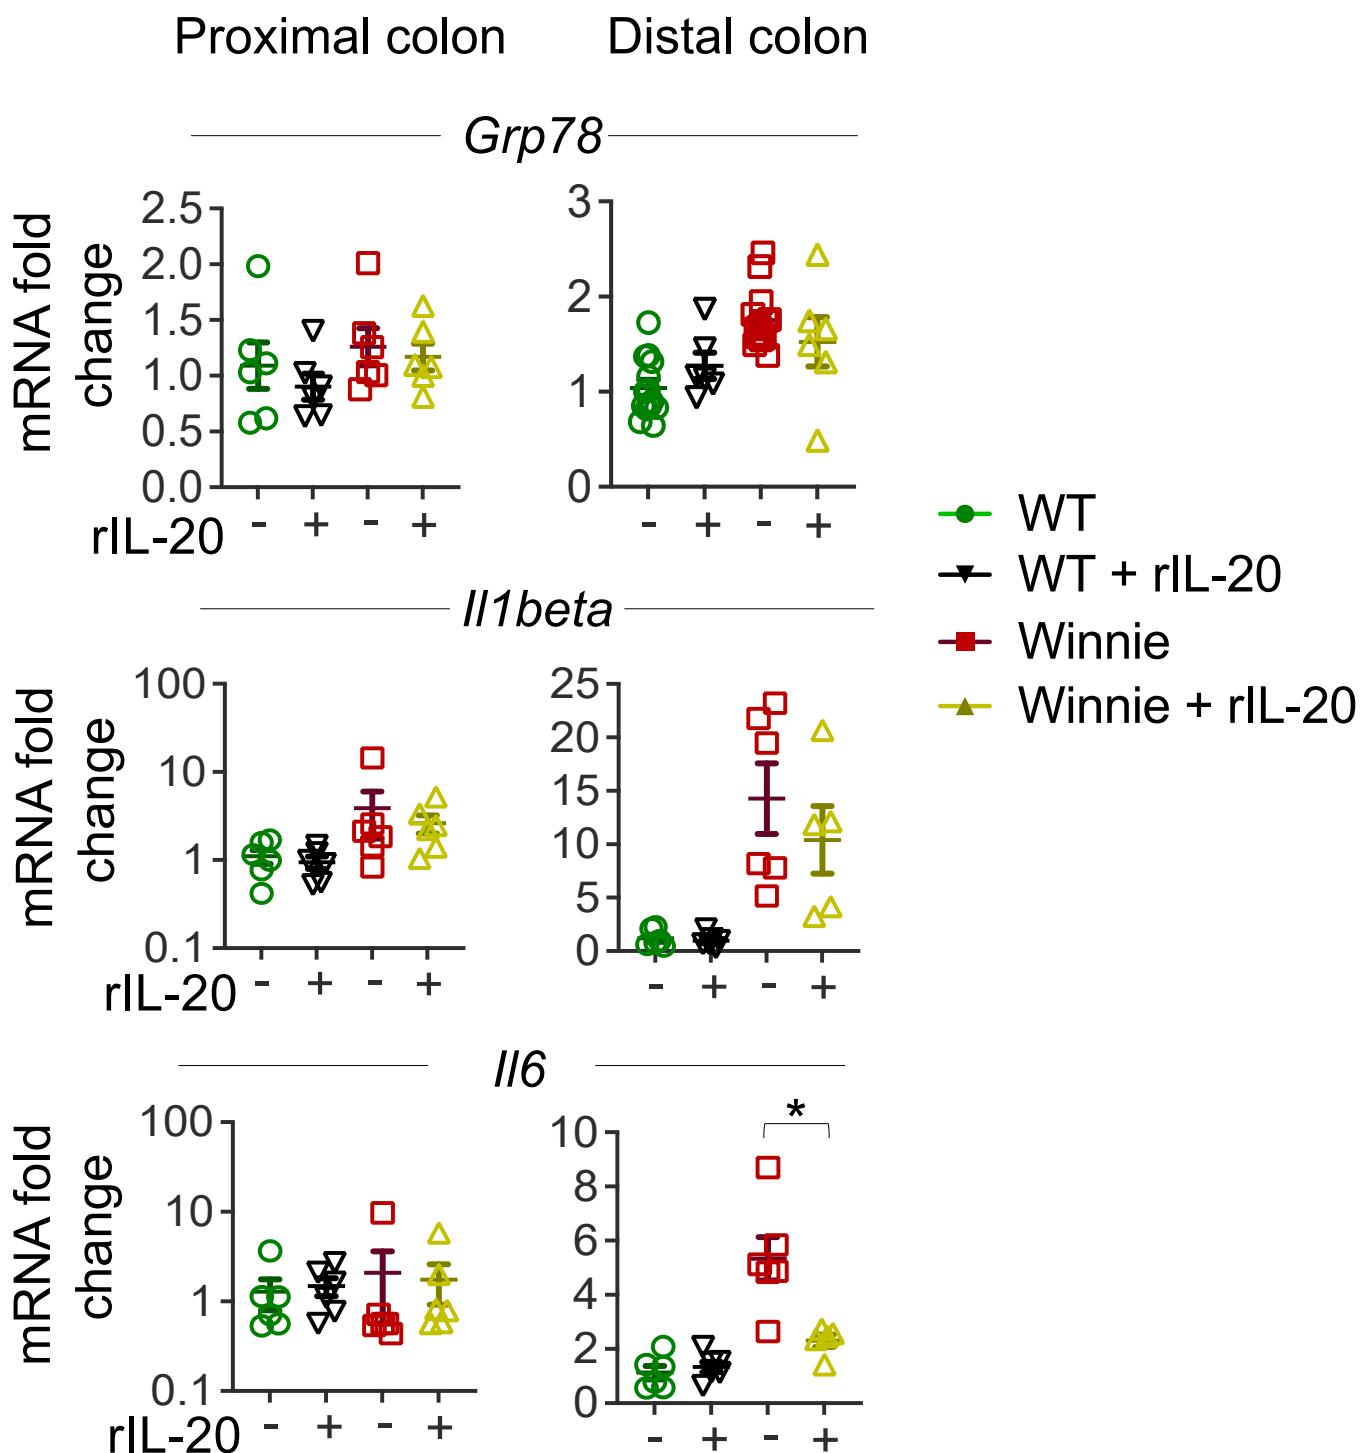

Figure S4: ER stress and pro-inflammatory markers in rIL-20 treated Winnie mice. Relative mRNA levels of *GRP78*, *II1 β* and *Il6* measured by qRT-PCR in the proximal and distal colon tissues harvested from naïve and rIL-20 treated C57BL/6 and Winnie mice (as described in Figure 3). Data are presented as mean \pm SEM (n=6-8). * P<0.05, one-way ANOVA followed by Dunnett's post hoc test.
