

Supplementary figure S1. Membrane ruffling assay. MDCKII cells were transfected with plasmids expressing GST-tagged RacGAP domains of SRGAP2, SRGAP3, RICH2, ABR, or BCR and were then stimulated with
rHGF (100 pM) at 37°C for 15 min. Cells were stained with anti-GST antibody and Alexa Fluor 488-conjugated phalloidin for immunohistological analysis. Scale bar, 10 μm.
