

Supplementary material:

Supplementary Figure S1. DHT inhibited the activity of H1299 cells and HLF cells. **a** H1299 cells were treated with different concentrations of DHT (0.25, 0.5, 1 μM) for 24 hours, and then the cell activity was detected by microplate reader. **b** HLF cells were treated with different concentrations of DHT (2, 4, 8 μM) for 24 hours, and then the cell activity was detected by microplate reader. ($n \geq 3$, *** $p < 0.001$ vs DHT (0 μM) group.)
