**Figure S1.** BAM images ( $720 \mu\text{m} \times 400 \mu\text{m}$ ) taken for the monolayers composed of phospholipids isolated from the *L. gormanii* bacteria cultured on the non-supplemented choline (PL-choline) medium, in the presence or absence of the LL-37 peptide at 20°C or 37°C.

**Figure S2.** BAM images ( $720 \mu\text{m} \times 400 \mu\text{m}$ ) taken for the monolayers composed of phospholipids isolated from the *L. gormanii* bacteria cultured on the choline supplemented (PL+choline) medium, in the presence or absence of the LL-37 peptide at 20°C or 37°C.
