Supplemental Table S1. Classification of GFP-SARS-CoV-2 E protein interactors according to GoTERM categories of biological process . Proteins classified into the distinct GoTERM categories are listed; the total number of proteins is indicated at the bottom. Color assigned to the different GoTERM categories as shown in Figure 3A.

Supplemental Table S2. Classification of GFP-SARS-CoV-2 E protein interactors according to GoTERM category of cellular compartments. Proteins classified into the distinct cellular region or cell compartment are listed; the total number of proteins is indicated at the bottom. Color assigned to the different categories is according to Figure 3B.

A**B**

Supplemental Figure S1. Expression of the recombinant GFP SARS-CoV-2 E protein in Caco-2 cells. (A) Cells were transfected with either the plasmid pEZYeGFP (empty vector; line 1) or with the pEZYeGFP-SARS-CoV-2 E construct (line 2). After 24 h, cells were lysed and analyzed by Western Blot using anti-GFP and anti-tubulin Abs. (B) Caco-2 cells were seeded into coverslips, transfected with the pEZYeGFP-SARS-CoV-2 E construct and next day fixed and analyzed by confocal microscopy. Two different confocal planes (Z) of a representative transfection are shown.

A

Pearson's coefficient (-1 to 1)
0.60

Li's intensity correlation (-0.5 to 0.5)
0.28

M1 coefficient: fraction of channel A (GFP-E)
overlapping to channel B (syntenin): 0.609

M2 coefficient: fraction of channel B (syntenin)
overlapping to channel A (GFP-E): 0.470

B

Pearson's coefficient (-1 to 1)
0.703

Li's intensity correlation (-0.5 to 0.5)
0.34

M1 coefficient: fraction of channel A (GFP-E)
overlapping to channel B (ZO-2): 0.442

M2 coefficient: fraction of channel B (ZO-2)
overlapping to channel A (GFP-E): 0.796

C

Pearson's coefficient (-1 to 1)
0.713

Li's intensity correlation (-0.5 to 0.5)
0.32

M1 coefficient: fraction of channel A (GFP-E)
overlapping to channel B (IL-16): 0.650

M2 coefficient: fraction of channel B (IL-16)
overlapping to channel A (GFP-E): 0.596

Supplemental Figure S2. GFP-SARS-CoV-2 E protein co-localization with PDZ proteins in THP-1 monocytes. Representative analysis of the co-localization of the GFP-SARS-CoV-2 E protein with the PDZ proteins (A) syntenin, (B) ZO-2 and (C) IL-16. The images shown were analyzed with the JaCoP plugin. Mander's coefficient was used to determine the concurrence of both proteins, while Pearson's coefficient and Li's intensity correlation were used for analysis of fluorescence intensity correlation.

Mander's coefficient (ranging from 0 to 1) was determined using automatic threshold. M1 corresponds to the fraction of channel A (green; GFP-E) that overlaps with channel B (red; PDZ protein), while M2 corresponds to the fraction of channel B (red; PDZ protein) overlapping with channel A (green; GFP-E). M values are indicated below for each image.

Pearson's coefficient (ranging from -1 to 1) and Li's intensity correlation (ranging from -0.5 to 0.5), were also used. In all the cases the analysis showed partial co-localization since concurrence was restricted to certain cell regions.
