

**Supplementary Table S1.** Effect of a low dose of 5-Aminolevulinic acid (ALA)/sodium ferrous citrate (SFC) on endotoxin-induced uveitis (EIU)

Group	Clinical scores	Number of infiltrating cells in AqH (× 10 <sup>5</sup> cells/ml <sup>-1</sup> )	Protein concentration in AqH (mg/ml <sup>-1</sup> )
ALA/SFC (10/15.7 mg/kg <sup>-1</sup> )	2.8 ± 0.45	8.1 ± 2.66	29.44 ± 6.36

Each value represents the mean ± SD (n = 5). ALA: 5-Aminolevulinic acid; AqH: aqueous humor; EIU: endotoxin-induced uveitis; LPS: lipopolysaccharide; Pred: prednisolone; SFC: sodium ferrous citrate.
