

Supplement Figure 1. NS1 protein purification. **(a)** FPLC chromatography on Sephadex 200 of concentrated cell culture medium of NS1 encoding plasmid (solid line) or vector (dotted line) transfected 293T cells. **(b)** Western blot analysis of FPLC fractions with anti-NS1 antibodies (clone 4C4). **(c)** Fraction 3 and 4 were pooled and concentrated. Obtained NS1 samples were resolved by SDS-PAGE and stained with Coomassie blue.
