1. SI

Here, the distance between all possible amino acid residue pairs of the three-dimensional peptide structure is represented using a two-dimensional matrix. The ij element of the matrix is colored darker, depending on how close the two residues are. The distance between atoms i and j (*i.e.* the bond C_i-C_j) atom has been established at the threshold of 11 Å. Figure (see SI (f)) also shows the contact map for the published EPI-X4 structure (N1).

(a) Conformer C001

(b) Conformer C026

(c) Conformer C054

(d) Conformer C090

(e) Conformer C125

Figure S1. Charge distribution of selected conformers gained from ReaxFF structure optimizations.(a) Conformer 001 as the energetically favored conformer, (b)-(e) conformers C026, C054, C090 and C125. Red color refers to negatively charged areas, white represents charge neutrality and blue would refer to positively charged areas of the structures. On the right side are schematics of the conformers shown.

Figure S2. Contact maps of certain conformers: (a) Conformer 1 as the energetically favoured structure (b)-(e) conformers C026, C054, C090 and C125 (f) NMR conformer N1. White stands both for a distance of 11 Å and more, black for 0 Å. The gray tones are linearly interpolated between white and black.
