

Supplementary Figure

Supplementary Figure S1. Resting motor threshold (RMT) in each group. Data are presented as the mean \pm standard error of the mean ($n = 15$ per group).

Supplementary Figure S2. Representative images of Fluo-4 and anti-GABA immunostaining of rodent primary cortical neurons at DIV 12 after weak ultrasound stimulation. Weak ultrasound stimulation-activated neurons were stained with Fluo-4 (green). The activated neurons were partially co-immunostained with anti-GABA.
