

### Supplementary Figure S1.

**A-D:** Baseline ECG parameters calculated during non-rapid-eye-movement sleep (NREMS) in *Cdkl5* +/+ (n=8) and *Cdkl5* +/- (n=10) female mice. **A:** Mean interval between the beginning of the P wave (onset of atrial depolarization) and the beginning of the QRS complex (onset of ventricular depolarization). **B:** Mean duration of atrial depolarization (P wave). **C:** Mean duration of the depolarization of the right and left ventricles (QRS complex). **D:** Mean duration of ventricular repolarization (JT interval). **E,F:** Absolute value of RR (mean heart period duration, E) and QTc (mean duration of interval between Q and T waves after applying Hodge's formula, F) intervals after either Atropine (*Cdkl5* +/+ n= 5 and *Cdkl5* +/- n= 8) or Atenolol (*Cdkl5* +/+ n= 8 and *Cdkl5* +/- n= 8) infusion. Results are presented as means  $\pm$  SEM. \* p<0.05, \*\* p<0.01; (two-tailed Student's t-test after 2-way ANOVA).
