Supplementary Figure S2. Numbers of differentially expressed genes with various thresholds (p-value adjusted and fold change).

Supplementary Figure S3. Analysis of AIPL1 expression. AIPL1 gene product was detected by western blot using HEK293T cells transfected with pAAV-AIPL1co-His and pAAV-AIPL1wt-His plasmids. AIPL1 protein specific band at 36 kDa was detected in cell lysates with anti-His antibodies (A). Various amount of HEK293T cell lysate was loaded in SDS-PAGE (B). Relative optical density units (ROD) of protein specific bands were calculated and plotted in a graph to visualize the difference between pAAV-AIPL1co-His and pAAV-AIPL1wt-His transfected cells (C). AAV-AIPL1co-His showed 1.39 time increase of overall protein product compared to pAAV-AIPL1wt-His transfected HEK-293T cells.

Supplementary Figure S4. RNA-sequencing normalized *AIPL1* gene variants counts. Error bars represent standard deviation between replicates within sample groups.
