

Supplementary Materials Data

Scheme 1. Screening of the effect of food ingredients on OATP4C1-mediated transport under the presence of AA. Cells were incubated with 1 μ M T₃ with or without food ingredients for 10 min at 37 °C under the presence of 10 μ M AA. The concentrations of the compounds were 100 μ M except for theaflavin (50 μ M). The amount of OATP4C1-mediated uptake was calculated by subtracting the nonspecific uptake of T₃ by mock cells from the total cellular uptake by the OATP4C1-expressing cells. Data are shown as mean \pm standard error (S.E.) (n = 3). * p < 0.05, significantly different from control by one-way analysis of variance followed by Tukey's test.

Scheme 1. Inhibition parameters of food ingredients for OATP4C1 and other drug transporters in the liver and kidney.

Compounds	Inhibition (IC_{50} or K_i values (μM)) or elevation (EC_{50} values (μM)) parameters						
	OATP4C1	OATP1B1	OATP1B3	OATP2B1	OAT1	OAT3	P-gp
Apigenin	Yes (54%, 100 μM)	0.6 \pm 0.2 ^{1*} 53.4 \pm 2.1 ¹ Yes ²	16.7 \pm 1.6 ^{1*}	13.9 \pm 1.6 ³ 20.8 \pm 8.0 ³	0.212 \pm 0.010 ⁴	0.410 \pm 0.157 ⁴	-

K_i values of OATP4C1 are expressed as mean \pm S.E. Data for IC_{50} , K_i , or EC_{50} values of the food ingredients are obtained from previous reports. Asterisk (*) indicates a K_i value instead of an IC_{50} .

value. EC₅₀ value is expressed as mean ± S.E. if the compound elevates the transporter mediated uptake. Yes, the food ingredients inhibited the transporter-mediated substrate uptake (inhibition degree, concentration of the flavonoid (if available)); No, no inhibition or elevation was observed; - , no data available; Elevation, elevation was observed.
