

Supplementary Materials

Supplementary Figure S1. The hub genes were screened out by five algorithms from CytoHubba. The protein-protein interaction network of hub genes shows the analysis results generated by the algorithms of (A) degree, (B) MNC, (C) EPC, (D) EcCentrality and (E) MCC. The red nodes represent high-scoring genes, whereas the yellow nodes represent low-scoring genes.

Supplementary Figure S2. The protein-protein interaction network of the upregulated genes analyzed using the STRING online database, identified hub genes and applied plug-in MCODE (MOCDE >3.0). Gene represented MCODE score >3.0. Cluster 1 involved all hub genes (AGT, ASNS, ATF3, ATF4, DDIT3, EFNA5 and VEGFA). Red represents hub genes.
